QUESTION 1

Your customer receives an alert from their network operation center, they are seeing ARP and Ping scans of their network originating from the firewall. What could be the reason for the behaviour?

A. Check Point firewalls probe adjacent networking devices during normal operation.

B. IPS is disabled on the firewalls and there is a known OpenSSL vulnerability that allows a hacker to cause a network scan to originate from the firewall.

C. One or both of the firewalls in a cluster have stopped receiving CCP packets on an interface.

D. Check Point\\'s Antibot blade performs anti-bot scans of the surrounding network.

Correct Answer: C

QUESTION 2

You are attempting to establish a VPN tunnel between a Check Point gateway and a 3rd party vendor. When attempting to send traffic to the peer gateway it is failing. You look in SmartView Tracker and see that the failure is due to "Encryption failure: no response from peer". After running a VPN debug on the problematic gateway, what is one of the files you would want to analyze?

A. $FWDIR/log/fw.log

B. $FWDIR/log/fwd.elg

C. $FWDIR/log/ike.elg

D. /var/log/fw_debug.txt

Correct Answer: C

QUESTION 3

John is a Security Administrator of a Check Point platform. He has a mis-configuration issue that points to the Rule Base. To obtain information about the issue, John runs the command:

A. fw debug fw on and checks the file fwm.elg.

B. fw kdebug fwm on and checks the file fwm.elg.

C. fw debug fwm on and checks the file fwm.elg.

D. fw kdebug fwm on and checks the file fw.elg.

Correct Answer: C

QUESTION 4

![Pass2Lead](https://Pass2Lead.com)
