Correct Answer: C

---

#### QUESTION 5

A healthcare company has several small outlying locations with extremely limited bandwidth to corporate headquarters. Maintenance of computers in these locations has improved significantly with the recent addition of a Site Server and fully automated installations of operating systems using Deployment Solution. The only exception is with new computers or computers that need to have their OS drive replaced. The system administrator is unable to apply a new operating system to these computers remotely. What needs to be configured to enable fully automated imaging of these computers?

- A. enable Initial Deployment, configure Respond Using PXE, deploy the Automation plug-in to the site server
- B. create a PXE server and configure DHCP to forward requests to it, copy OS files to the remote location, build a valid preboot configuration
- C. configure PXE Services to start, create a preboot configuration to use PXE, send updated inventory to the CMDB
- D. enable Respond to New Computers, install PXE services on the site server, configure replication of the PXE configurations

Correct Answer: C
