-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

What are two functions of the RAP in a mesh network? (Choose two.)

- A. It provides a wired connection for the wireless mesh APs.
- B. It adds capacity and resilience to a mesh area.
- C. It creates a centralized management location for the mesh network.
- D. It reduces the hop count to the wireless network that is connected to the edge.
- E. It routes traffic from the wireless mesh to the wired network.

Correct Answer: BD

---

### QUESTION 2

A client reports that video is not streaming. The administrator determines the client is connecting at a data rate of 12 Mbps and is trying to stream to a valid multicast address on the network. What three items should the administrator check next to troubleshoot the issue? (Choose three)

- A. IGMP snooping is turned off because the client cannot request to join a group, only access points can.
- B. Video-stream for the multicast video is configured in the controller.
- C. WLAN has been set for a QoS value of Platinum.
- D. WLAN has been configured to allow multicast-direct to work correctly and multicast-direct has been enabled globally.
- E. WLAN has been set for a QoS value of Gold.
- F. RTSP is used to stream the video due to wireless multicast not using acknowledgements.

Correct Answer: BDE

---

### QUESTION 3

What is a realistic way to minimize inter-controller roaming in a large multibuilding campus?

- A. Each controller must belong to a different mobility group.
- B. All APs must join a single controller across the entire campus.
- C. APs in each building must join the same controller.
- D. APs in each building must be load balanced across controllers.

Correct Answer: A

---

#### QUESTION 4

A customer recently implemented WLC wireless multicast. Clients are connecting at the highest mandatory wireless rate of 24 Mbps and are receiving multicast traffic, but WLC CPU utilization and wired side network load has increased substantially. What three actions should the engineer take next to optimize the configuration? (Choose three.)

- A. verify that Global Multicast mode has been enabled
- B. verify that IGMP snooping is disabled on the wireless controller since the access points are handing IGMP messages from the clients.
- C. make sure the highest mandatory rate is set to 54 Mbps so that the multicast traffic has sufficient bandwidth
- D. verify Multicast Listener Discovery (MLD) v1 snooping has been enabled to keep track of and deliver IPv4 multicast flows
- E. change the wireless controller from Multicast-Unicast mode to Multicast-Multicast mode and assign a multicast address in the 239.X.X.X/8 subnet
- F. verify that the L3 interfaces are configured for pim sparse-dense-mode on the VLAN servicing the wireless access points as well as the wireless controller's management VLAN

Correct Answer: ABE

---

#### QUESTION 5

An engineer wants to configure WebEx to adjust the precedence and override the QoS profile on the WLAN. Which configuration is needed to complete this task?

- A. Change the AVC application WebEx-app-sharing to mark
- B. Create an ACL for WebEx.
- C. Change the WLAN reserved bandwidth for WebEx.
- D. Create an AVC profile for WebEx marked with a lower DSCP value

Correct Answer: A
