- ⚙️ **800,000+** Satisfied Customers

#### QUESTION 1

When using HAProxy to load balance requests over a set of web servers, what directive is needed in the HAProxy configuration in order to be able to log, on the backend web servers, the IP address of the client making a request?

- A. option reverseproxy
- B. option forwardfor
- C. option clientlog
- D. option exposeclient

Correct Answer: B

---

#### QUESTION 2

Which of the following statements are true regarding Xen domains? (Choose TWO correct answers.)

- A. Fully virtualized and paravirtualized domains are managed using the same tools and commands.
- B. Xen domains of all types require virtualization extensions in the host system's CPU.
- C. All fully virtualized domains are called 'Dom0' while all paravirtualized domains are called 'DomU'.
- D. Both paravirtualized and fully virtualized domains may run on the same host system.
- E. Paravirtualized domains are significantly slower than fully virtualized domains.

Correct Answer: AD

---

#### QUESTION 3

When running a Linux Virtual Server (LVS) cluster, what is the purpose of a nanny process?

- A. Each nanny process checks the state of one configured service on one real server, and tells LVS if the service on that real server is malfunctioning.
- B. The nanny process powers off a nonfunctional backend server.
- C. The nanny process restarts the daemon of a failed service on a real server node.
- D. The nanny process changes the IP routing table in the Linux kernel according to the LVS configuration.

Correct Answer: A

---

#### QUESTION 4
