**QUESTION 1**

You are designing a CLR stored procedure that will access a remote Web service.

You need to ensure that the CLR stored procedure can access the remote Web service.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Grant EXECUTE on the CLR stored procedure.
- B. Implement a custom trust level policy.
- C. Configure the CLR stored procedure to use the SAFE permission set.
- D. Configure the CLR stored procedure to use the EXTERNAL_ACCESS permission set.

Correct Answer: BD

QUESTION 2

You need to recommend a solution that will enable two or more application sessions to share the same transaction and locks. The solution must enable the applications to work on the same data without creating lock conflicts. What should you recommend?

- A. a stoplist
- B. bound sessions
- C. nested transactions
- D. savepoints

Correct Answer: B

QUESTION 3

Your company has four offices. Each office contains a server that runs SQL Server 2008.

All corporate data is stored in a central location.

You need to create a reporting solution. The solution must meet the following requirements:

What should you do?

- A. Implement database mirroring.
- B. Implement log shipping.
- C. Create horizontally partitioned tables and a federated database.

D. Implement a geographically dispersed SQL Server 2008 cluster.

Correct Answer: B

QUESTION 4

You have a table that contains an XML column named XMLData1. The column contains the following nodes:

You need to design a stored procedure that will return only the title and description in a tabular result set.

The solution must be developed by using minimum amount of effort.

How should you extract the information?

- A. Execute sp_preparedocument.
- B. Use FOR XML PATH in a select statement.
- C. Use XMLData1.Exists () in a select statement.
- D. Use XMLData1.Query () in a select statement.

Correct Answer: D

QUESTION 5

You are a database developer. You plan to design a database solution by using SQL Server 2008.

A database contains a table named Employee_Vacation.

You are given an updated list of employee vacations used. The list is in an XML formatted file. The extract of the XML format is written in the following manner.

You plan to import the data and update the Employee_Vacation table. You design a query to calculate the number of vacation days used by each employee.

You need to ensure that vacation days are accurately counted for each employee.

What should you do?

- A. Use an XQuery expression along with the LET clause and the count function. Return the count in XML format.
- B. Use an XML index. Aggregate the number of vacation days for each employee, and then return the total count in XML format.
- C. Use the OPENXML function to convert XML data into a standard table format. Execute the Transact-SQL count function on the vacation days, and then return the count in XML format.
- D. Use an XQuery expression to write the information from XML format to a SQL Server table. Aggregate the number of vacation days from the tables, and then return the count in XML format.

Correct Answer: A
