**QUESTION 1**

You are developing a SQL Server Integration Services (SSIS) project by using the Project Deployment model. A package in the project extracts data from a Windows Azure SQL Database database. The package is deployed to SQL Server.

The package is not producing the desired results.

You need to generate the .mdmp and .tmp debug files in order to troubleshoot the issues.

- A. Execute the catalog.create_execution_dump stored procedure with the package execution_id.
- B. Run the DTEXEC utility with the /Reporting V option.
- C. Run the DTEXEC utility with the /Logger option.
- D. Execute the catalog.add_data_tap stored procedure with the package execution_id.

Correct Answer: A

QUESTION 2

You are a database administrator of a Microsoft SQL Server 2012 environment. The environment contains two servers named SQLServer01 and SQLServer02.

The database Contoso exists on SQLServer01.

You plan to mirror the Contoso database between SQLServer01 and SQLServer02 by using database mirroring.

You need to prepare the Contoso database for database mirroring. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct

order.)

Select and Place:

Back up Contoso or SQLServer01 by using a full backup.

Back up Contoso or SQLServer01 by using a full backup followed by a transaction log backup by using the **NORECOVERY** option.

Back up Contoso or SQLServer01 by using a transaction log backup. Restore the transaction log backup by using the **RECOVERY** option on SQLServer02.

Back up Contoso on SQLServer01 by using a transaction log backup. Restore the transaction log backup by using the **NORECOVERY** option on SQLServer02.

Restore the full database backup of Contoso by using the **NORECOVERY** option on SQLServer02 as Contoso.

Restore the full database backup of Contoso by using the **RECOVERY** option on SQLServer02 as Contoso_Mirror.

Correct Answer:

Back up Contoso or SQLServer01 by using a full backup followed by a transaction log backup by using the **NORECOVERY** option.

Back up Contoso or SQLServer01 by using a transaction log backup. Restore the transaction log backup by using the **RECOVERY** option on SQLServer02.

Restore the full database backup of Contoso by using the **RECOVERY** option on SQLServer02 as Contoso_Mirror.

Back up Contoso on SQLServer01 by using a full backup.

Restore the full database backup of Contoso by using the **NORECOVERY** option on SQLServer02 as Contoso.

Back up Contoso on SQLServer01 by using a transaction log backup. Restore the transaction log backup by using the **NORECOVERY** option on SQLServer02.

According to these references, this answer looks correct.

QUESTION 3

You administer a Microsoft SQL Server 2012 database instance.

You plan to migrate the database to Windows Azure SQL Database. You verify that all objects contained in the

database are compatible with Windows Azure SQL Database.

You need to ensure that database users and required server logins are migrated to Windows Azure SQL Database.

- A. Back up the database from the local server and restore it to Windows Azure SQL Database.
- B. Use the Copy Database wizard.
- C. Use the Database Transfer wizard.
- D. Use SQL Server Management Studio to deploy the database to Windows Azure SQL Database.

Correct Answer: D

QUESTION 4

You are developing a SQL Server Integration Services (SSIS) package. The package contains several tasks that must repeat until an expression evaluates to FALSE. You need to add and configure a container to enable this design. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place: Select and Place:

Configure the **EvalExpression** property.

Configure the **Enumerator** property.

Open the Data Flow designer of the package.

Add and edit a For Loop container.

Add and edit a Foreach Loop container.

Open the Control Flow designer of the package.

Correct Answer:

Configure the **Enumerator** property.

Open the Data Flow designer of the package.

Add and edit a Foreach Loop container.

Open the Control Flow designer of the package.

Add and edit a For Loop container.

Configure the **EvalExpression** property.

Box 1: Open the Control Flow designer of the package.

Box 2: Add and edit a For Loop container.

Box 3: Configure the EvalExpression property.

QUESTION 5

You administer a Microsoft SQL Server 2012 database.

The database is backed up according to the following schedule:

Daily full backup at 23:00 hours.

Differential backups on the hour, except at 23:00 hours.

Log backups every 10 minutes from the hour, except on the hour.

The database uses the Full recovery model.

A developer accidentally drops a number of tables and stored procedures from the database between 22:40 hours and 23:10 hours. You perform a database restore at 23:30 hours to recover the dropped table.

You need to restore the database by using the minimum amount of administrative effort. You also need to ensure minimal data loss.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Restore the most recent full backup.
Restore the full backup taken the previous night.
Restore the differential backup taken at 22:00 hours.
Restore the transaction log backup taken at 22:40 hours.
Restore each transaction log backup taken from 22:00 hours till 22:40 hours.
Restore each transaction log backup taken from the most recent full backup.
Restore each differential database backup taken from the previous night's full backup.
Restore each transaction log backup taken from the previous night's full backup till 22:40 hours.

Correct Answer:

Restore the most recent full backup.	Restore the full backup taken the previous night.
	Restore the differential backup taken at 22:00 hours.
Restore the transaction log backup taken at 22:40 hours.	Restore each transaction log backup taken from 22:00 hours till 22:40 hours.
Restore each transaction log backup taken from the most recent full backup.	
Restore each differential database backup taken from the previous night's full backup.	
Restore each transaction log backup taken from the previous night's full backup till 22:40 hours.
