**QUESTION 1**

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You represent a SAM partner organization.

A client must consolidate their IT departments into a single business unit. The client was previously assessed in the key competencies and assigned a Microsoft SAM Optimization Model (SOM) level. The client purchases software as needed

for each project.

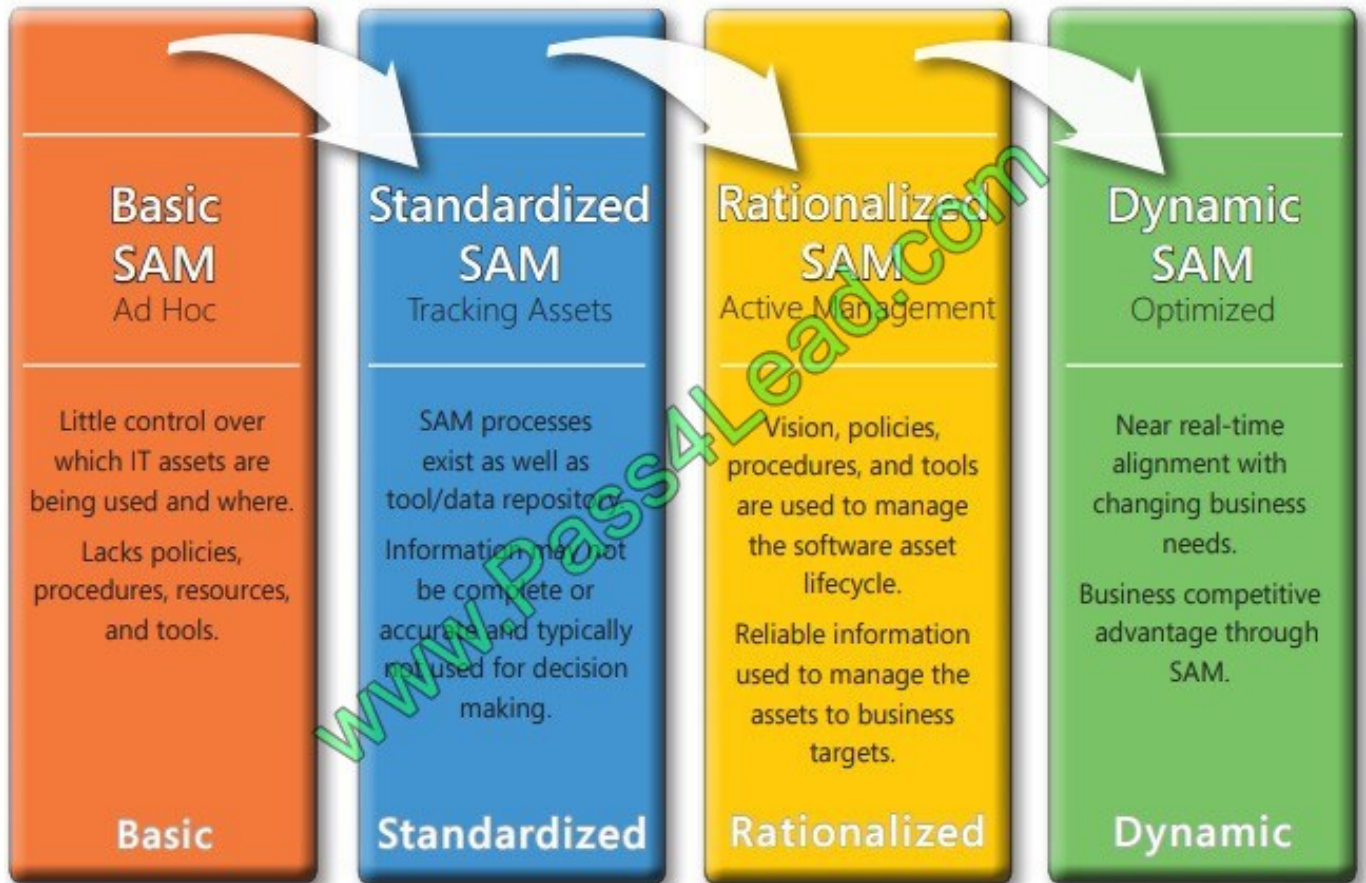

You need to ensure the client progresses to the next SOM level. What should the client do?

- A. Purchase software only from approved vendors.
- B. Publish software deployment reports to stakeholders.
- C. Use information provided by a software publisher.
- D. Use software metadata generated by the client.
- E. Deploy only approved software.
- F. Formulate a retirement process.
- G. Create an inventory of deployed assets.
- H. Maintain updated records of deployed assets.

Correct Answer: G

Optimization models provide companies with a methodology for understanding their IT capabilities. They provide an actionable roadmap to help organizations transition from one Optimization level to the next.

Using the IO stages of Basic, Standardized, Rationalized, and Dynamic, your SAM partner can conduct a SAM Optimization assessment based on 10 key SAM competencies. The end goal of the assessment is to evaluate the SAM Optimization level of your organization based on a set of established and objective criteria. Once your organization knows its optimization level, it can work to advance from one optimization level to another, based on guidance from your SAM partner.

QUESTION 2

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

An organization uses Microsoft SQL Server and SQL Server Reporting Services (SSRS) for inventory reporting.

The organization must generate a report that includes detailed hardware information for desktops and servers in the environment. The report must use data that is collected from a scheduled inventory process.

What should you use?

- A. Microsoft Assessment and Planning Toolkit (MAP)
- B. Microsoft Deployment Toolkit (MDT)
- C. Microsoft Intune
- D. Microsoft License Advisor (MLA)

- E. Microsoft Security Compliance Manager (SCM)
- F. System Center Configuration Manager (ConfigMgr)
- G. System Center Operations Manager (OpsMgr)
- H. Microsoft Virtual Machine Manager (VMM)

Correct Answer: F

Reporting in System Center Configuration Manager provides a set of tools and resources that help you use the advanced reporting capabilities of SQL Server Reporting Services (SSRS) and the rich authoring experience that Reporting

Services Report Builder provides.

Reporting helps you gather, organize, and present information about users, hardware and software inventory, software updates, applications, site status, and other Configuration Manager operations in your organization.

QUESTION 3

An organization is implementing a SAM program. The organization is focused on achieving Tier 1 of the ISO 19770-1 specification.

You need to verify that contracts are reported on and inventoried.

What should you include in the report?

- A. the last reported hardware inventory date
- B. any approved exceptions to the contracts
- C. contracts that do not match billing statements
- D. the last reported software inventory date

Correct Answer: C

QUESTION 4

An organization purchases all licenses through a Microsoft Open License agreement. The organization retains all purchasing information in a Microsoft Excel spreadsheet.

You need to ensure that the organization's purchasing information is accurate.

What should you use?

- A. Microsoft Volume Licensing Service Center (VLSC)

- B. Microsoft License Advisor (MLA)
- C. System Center Configuration Manager (ConfigMgr)
- D. Microsoft License Statement (MLS) report

Correct Answer: D

Have you ever asked your Microsoft account team to help you understand what licenses you own? If so, you may have received a spreadsheet listing the contents of your current Select or Enterprise Agreement. While that information is useful, it's not complete. It only includes data on what you have bought during the current agreement term. What about the products you bought four years ago? Or ten years ago?

To achieve a complete view of your Microsoft investment, you need an inventory something called a Microsoft License Statement (MLS). This little known spreadsheet document is a comprehensive effort by Microsoft to inventory every license transaction made by your company. It's common to see transactions going back fifteen or twenty years on the MLS.

QUESTION 5

This question requires that you evaluate the underlined text to determine if it is correct.

You issue mobile devices to employees and assign Microsoft Office 365 Enterprise E3 licenses. You are unsure if the employees are using Office 365 E3 capabilities. Some employees use unapproved third-party cloud storage Software-as-a-

Service (SaaS) apps.

You must determine if you can downgrade the E3 licenses to E1 licenses. You must also identify which devices have unapproved third-party cloud storage SaaS apps.

You recommend Microsoft Intune to collect usage data for Office 365 apps and unapproved third-party cloud storage SaaS apps on corporate-owned mobile devices.

Review the underlined text. If it makes the statement correct, select "No change is needed." If the statement is incorrect, select the answer choice that makes the statement correct.

- A. No change is needed.
- B. Microsoft Operations Management Suite (OMS)
- C. Microsoft Cloud App Security (MCAS)
- D. System Center Configuration Manager (ConfigMgr)
- E. System Center Operations Manager (OpsMgr)

Correct Answer: C

With Microsoft Cloud App Security you can identify more than 15,000 apps and assess risk based on 60 different parameters, including regulatory compliance. Discovery tools collect information from firewalls and proxies to know which cloud apps are in use and assign each app a risk score, all without using agents.

Incorrect Answers:

A: Microsoft Intune is a cloud service that provides mobile device management, mobile application management, and PC management capabilities. Intune's mobile productivity management capabilities help organizations provide their employees access to corporate data, applications, and resources, while helping to protect their corporate information.
