### QUESTION 1

You have a Windows image.

You plan to deploy the image to several client computers. The client computers will be delivered to several different customers.

You plan to provide all of the customers with the ability to perform a push-button reset of their computers from recovery media.

You need to identify which encoding format must be used for the script file.

Which encoding format should you identify?

- A. ANSI
- B. UTF-8
- C. Unicode
- D. BigEndianUnicode

Correct Answer: B

---

### QUESTION 2

You create a custom installation of Windows that contains several XML files.

You deploy a test computer by using the custom Windows installation and notice that some of the installation options are missing.

Which XML file should you inspect to identify all of the missing installation options? To answer, select the appropriate option from each list in the answer area.

### QUESTION 3

You work for an OEM system builder.

You use Windows Deployment Services (WDS) to deploy operating system images.

WDS contains a 32-bit boot image.

You receive a new client computer model that is 64-bit.

You add a 64-bit install image of Windows to WDS.

You attempt to deploy the new install image to the new computer model by using WDS. The boot image loads on the new computer, but you fail to apply the install image.

You discover that from the boot image on the new computer, you cannot connect to the WDS server.

You need to ensure that you can deploy the new install image to the new computer model.

What should you do?

- A. Inject the 64-bit driver for the network adapter into the install image.
- B. Inject the 32-bit driver for the network adapter into the boot image.

C. Inject the 64-bit driver for the network adapter into the boot image.

D. Inject the 32-bit driver for the network adapter into the install image.

Correct Answer: C

---

#### QUESTION 4

You are preparing the hard disk drive for a Unified Extensible Firmware Interface (UEFI)- based computer.

You start computer from a Windows Preinstallation Environment (Windows PE) environment.

You need to ensure that you can start Windows from the hard disk drive.

Which command should you use?

A. Bcdboot

B. Bootsect

C. Diskpart

D. Bcdedit

Correct Answer: C

You need to create a GPT formatted drive.

---

#### QUESTION 5

You start a client computer by using Pre-Boot Execution Environment (PXE). You load a default version of Windows Preinstallation Environment (windows PE) that was created by using the Windows Assessment and Deployment Kit

(Windows ADK).

You have a file server that contains a shared folder. The folder contains an image of Windows. The folder is shared to the local Users group only.

The computer has a system partition and a Windows partition.

You need to apply a reference installation from a network share.

Which command should you run before applying the image?

A. net.exe

B. mshta.exe

C. drvinst.exe

D. wpeinit.exe

Correct Answer: A
