QUESTION 1

Which of the following is the main purpose of an incident tracking process?

- A. To identify the average number of steps required to recreate each incident.
- B. To calculate the average turnaround times per defect.
- C. To identify the priority of each incident.
- D. To understand the status of each incident at any given time.

Correct Answer: D

Case Study # 3

Scenario

Data is transmitted over the internet as a series of packets. Each packet is sent to its destination via the best available route. The decision on the best available route is made by a series of routers on the internet.

In order to make the best decision on the route to take, the router:

- 1) Scans the destination address and matches it against rules set up in a configuration table.
- 2) Checks the performance of the primary connection to see if it is good enough to send the packet. If not, it seeks an alternative.

Routers handle many millions of packets being sent at the same time. Packets can take the form of email messages, data files etc.

QUESTION 2

At the end of Sprint 1, which of the following would give the best indication of test coverage?

- A. Number of user-stories required to define the trading environment.
- B. Amount of unit testing planned by developers for each user-story associated with the trading environment.
- C. Number of links required to the stock exchange.
- D. Percentage of user-stories tested and passed for the trading environment.

Correct Answer: D

QUESTION 3

Which of the following would be applicable as part of a test policy for testing these types of systems?

- a.

Systems must be tested for compliance to industry standard routing protocols.

b.

Testing for the latest upgrade will require testing of increased network traffic of 100%.

c.

Testing for the fix will require the use of dynamic analysis tools.

d.

Releases will not be made if systems have any high priority defects outstanding.

A.

a and b.

B.

a and d.

C.

b and c.

D.

b and d.

Correct Answer: B

QUESTION 4

Which of the following reviews would you recommend to address this issue?

A. A walkthrough of the requirement specification, to check for errors.

B. A management review of defects logged and cleared to see if defects are being addressed correctly.

C. A technical review of the industry standard routing protocols to see if they have inaccuracies in them.

D. An inspection of the code for this part of the functionality to try to localise the defective parts of the code.

Correct Answer: D

QUESTION 5

Which of the following would be an entry criterion into site acceptance testing for the air quality monitoring system?

A. That the code written to fulfil the requirement to monitor carbon dioxide levels has been 100% path tested.

B. That the functional specification accurately reflects requirements R1 and R2.

- C. That the system has been tested at levels of oxygen usage well beyond anticipated personnel levels.
- D. That the requirements for temperature control have been signed-off.

Correct Answer: C
