-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

What action should be taken after implementing a WLAN based on the design developed from the site survey process?

- A. Post-installation survey
- B. Requirements analysis
- C. Gathering facility documentation
- D. Design the infrastructure services

Correct Answer: A

QUESTION 2

When a WLAN controller sends an 802.11 frame to a lightweight AP for transmission on the wireless medium, how does it mark the frame for 802.11 QoS priority?

- A. The WLAN controller will place the user priority (UP) value in the QoS Control field of the 802.11 frame header before passing it to the lightweight AP.
- B. The WLAN controller does not mark 802.11 frames with priority values only the APs can do this.
- C. The WLAN controller does not mark the 802.11 frames with priority values only the Layer 3 switches can do this.
- D. The WLAN controller does not mark the 802.11 frames with priority values only the Layer 3 routers can do this.

Correct Answer: A

QUESTION 3

In a PC-based spectrum analyzer, what data chart identifies the overall RF utilization of a specific frequency in the environment being surveyed?

- A. FFT Max Hold
- B. FFT Average
- C. Swept Spectrogram
- D. Duty cycle

Correct Answer: D

QUESTION 4

A wireless engineer from your company performed a site survey in an office building where a wireless network extension was needed. He reports that while performing a Layer 1 sweep near a meeting room full of people, he

detected RF activity with a very low duty cycle. He is unsure how to interpret what he recorded to determine its impact on a future Wi-Fi network.

What is true about this RF environment and its potential impact on the WLAN?

- A. The signal affects the entire spectrum and will render the wireless network unusable. It must be located and removed.
- B. The signal has a low duty cycle and should not be of major impact on the wireless network.
- C. The signal is alternating between peaks (high interference level) and valleys (low interference level). The network channel design must be built to avoid the affected peak frequencies.
- D. The signal is typical of a high radio card background noise. It shows that the card used for the Layer 1 sweep should be replaced and the Layer 1 sweep re-done.

Correct Answer: B

QUESTION 5

You have determined the best mounting locations for APs in a given installation. The facilities manager has asked you to change the locations for several APs due to aesthetic concerns. You suggest mounting the APs in the ideal locations and painting them so they go unnoticed in the environment.

What is a valid recommendation or consideration when painting APs?

- A. Always use paints with metallic dye in them to prevent potential RF propagation impact.
- B. Painting APs will significantly reduce the output power.
- C. Painting APs may void the product manufacturer's warranty.
- D. Most AP models for indoor environments come in a variety of form factors and colors. Painting is never recommended.

Correct Answer: C
