QUESTION 1

On receipt of a JMS message on a queue (Q), a message-driven bean (MDB) processes the message by invoking a stateless session bean that does a data base update. Both enterprise beans execute within the same transaction context. The queue type destination in the underlying Service integration Bus corresponding to Q is defined with the "Maximum failed deliveries" attribute set to 0, and the "Exception destination" specific as \\'None\\'.

What happens when the processing of a particular message results in a transaction rollback?

A. The application server hosting the MDB is shutdown

B. The JMS runtime stops the delivery of the message to the application

C. The JMS runtime keeps delivering the message to the application

D. The message gets stranded on the queue (Q)

Correct Answer: C

QUESTION 2

A system administrator has just installed the WebSphere Application Server. The system administrator is interested in turning on global security in order to protect the environment. By enabling global security, all of the following security features will be activated EXCEPT:

A. Common Secure interoperability Version 2 (CSIV2)

B. Authentication to the administrative console

C. SSL between the plug-in and the embedded Web server

D. J2EE security

Correct Answer: C

QUESTION 3

A problem has been reported to a system administrator, however the system administrator is unable to use the Log Analyzer for some reason. Which of the following is an alternative way for the system administrator to review the Log Analyzer log file?

A. Use the dumplog command.

B. Use the showin command

C. Use any text editor although the formatting wont be as nice.

D. Format the Log Analyzer log with wsadmin and then use any text editor.

Correct Answer: B

QUESTION 4

Which of the following must a system administrator define when creating a JDBC provider at the cluster scope?

A. All datasources for this JDBC provider at the cluster level.

B. An XA data source implementation type, for the JDBC driver.

C. The symbolic Variable used in the class path to the JDBC driver for each node in the cluster

D. The J2C authentication data entry for the datasource at the cluster scope.

Correct Answer: C

QUESTION 5

A system administrator installed the WebSphere v6 plug-in on a machine that has a Web server and multiple application server profiles. A deployment manager was not used at this time. In this situation, Web server can be managed from the administrative console by connecting to which profile (s)?

A. Any of the profiles on that machine

B. The profile that was created first

C. The profile that was created last

D. The default profile

Correct Answer: D
