QUESTION 1

Which of the following best describes a Network Provisioning rule? (Choose 1)

- A. You can define one subnet per cluster and one pool per subnet.
- B. You can define one subnet per cluster and multiple pools per subnet.
- C. You can define multiple subnets per cluster and one pool per subnet.
- D. You can define multiple subnets per cluster and multiple pools per subnet.

Correct Answer: C

QUESTION 2

You are configuring a synchronization between two clusters using SyncIQ. You\\re root directory is /ifs/data. You create an include statement for /ifs/data/media and an exclude statement of /ifs/data/media/video. What will be synchronized to the other cluster? (Choose 1)

- A. Nothing will be synchronized.
- B. Everything in the ifs/data folder will be synchronized.
- C. Everything in the /ifs/data/media folder will be synchronized.
- D. Everything in the /ifs/data/media folder except the /ifs/data/media/video folder will be synchronized.

Correct Answer: D

QUESTION 3

Which of the following is true about support for IPv6 addresses on an Isilon cluster? (Choose 1)

- A. IP version 6 addresses are not supported on an Isilon cluster.
- B. IPv6 addresses are not supported on the internal internode network
- C. IPv6 addresses are not supported on the external network used for cluster clients.
- D. There are no restrictions on using IPv6 addresses

Correct Answer: B

QUESTION 4

To configure redundancy for the internal node network, how many non-overlapping sets of IP addresses are required? (Choose 1)

- A. None. The internal node network does not use TCP/IP.
- B. 1
- C. 2
- D. 3

Correct Answer: D

QUESTION 5

What does the Rebalance Policy control? (Choose 1)

- A. Whether or not NFS failover occurs.
- B. How static IP addresses are distributed to the nodes during NFS failover.
- C. How dynamic IP addresses are distributed after a failed node comes back online.
- D. How IP addresses are distributed among the nodes when NFS failover occurs.

Correct Answer: C
