QUESTION 1

Which command query will search the database for instances of the following FW-Corporate object:

A. select name from dleobjectderef_data where name = `FW-Corporate\\';

B. select data from dleobjectderef_data where name = `FW-Corporate\\';

C. select object `FW-Corporate\\' from dleobjectderef_data;

D. select name from dleobjectderef_table where name = `FW-Corporate\\';

Correct Answer: A

QUESTION 2

Consider IPv4 header. How does the Security Gateway handle an IP packet that has bits set in its option type field?

A. Modifies TCP/UDP packet with IP options automatically

B. Uses PSL mechanism to pad the IP Options field

C. Drop TCP/UDP packet with IP options

D. Accept TCP/UDP packet with IP options

Correct Answer: C

QUESTION 3

Joey\\'s implementing a new R80.10 firewall cluster into the network. During the implementation he notices

that the cluster object is in error state in SmartConsole. He tries to figure out the cause of the problem and

runs a ClusterXL kernel debug with command: 'fw ctl debug –m cluster + stat pnote conf ccp'

ClusterXL kernel debug shows him following info: fwha_set_new_local_state: Old version HA machines

exist around so prevent state change to READY.

How can he solve the problem?

A. cphaconf cluster_id set

B. cphaprob mmagic

C. Connect with GuiDBedit Tool to Security Management Server. Go to Table – Network Objects – network_objects. Select the relevant R80.10 Cluster object. Go to Search menu – Find – paste mac_magic. Right-click on the mac_magic the object – select Edit… and change the value to 254.

Save changes and install policy.

D. Connect with GuiDBedit Tool to Security Management Server. Go to Table – Network Objects – network_objects. Select the relevant R80.10 Cluster object. Go to Search menu – Find – paste cluster_magic. Right-click on the cluster_magic the object – select Edit… and change the value between 1 and 253. Save changes and install policy.

Correct Answer: D
