- ⚙️ **800,000+** Satisfied Customers

### QUESTION 1

Fill in the blank: The R80 feature \_\_\_\_\_ permits blocking specific IP addresses for a specified time period.

- A. Block Port Overflow
- B. Local Interface Spoofing
- C. Suspicious Activity Monitoring
- D. Adaptive Threat Prevention

Correct Answer: C

Suspicious Activity Rules Solution Suspicious Activity Rules is a utility integrated into SmartView Monitor that is used to modify access privileges upon detection of any suspicious network activity (for example, several attempts to gain unauthorized access). The detection of suspicious activity is based on the creation of Suspicious Activity rules. Suspicious Activity rules are Firewall rules that enable the system administrator to instantly block suspicious connections that are not restricted by the currently enforced security policy. These rules, once set (usually with an expiration date), can be applied immediately without the need to perform an Install Policy operation Reference: [https://sc1.checkpoint.com/documents/R76/CP\\_R76\\_SmartViewMonitor\\_AdminGuide/17670.htm](https://sc1.checkpoint.com/documents/R76/CP_R76_SmartViewMonitor_AdminGuide/17670.htm)

### QUESTION 2

Choose what BEST describes the Policy Layer Traffic Inspection.

- A. If a packet does not match any of the inline layers, the matching continues to the next Layer.
- B. If a packet matches an inline layer, it will continue matching the next layer.
- C. If a packet does not match any of the inline layers, the packet will be matched against the Implicit Clean-up Rule.
- D. If a packet does not match a Network Policy Layer, the matching continues to its inline layer.

Correct Answer: B

---

### QUESTION 3

Customer's R80 management server needs to be upgraded to R80.10. What is the best upgrade method when the management server is not connected to the Internet?

- A. Export R80 configuration, clean install R80.10 and import the configuration
- B. CPUSE online upgrade
- C. CPUSE offline upgrade
- D. SmartUpdate upgrade

Correct Answer: C

---

#### QUESTION 4

Check Point ClusterXL Active/Active deployment is used when:

- A. Only when there is Multicast solution set up
- B. There is Load Sharing solution set up
- C. Only when there is Unicast solution set up
- D. There is High Availability solution set up

Correct Answer: D

---

#### QUESTION 5

When you upload a package or license to the appropriate repository in SmartUpdate, where is the package or license stored

- A. Security Gateway
- B. Check Point user center
- C. Security Management Server
- D. SmartConsole installed device

Correct Answer: C

SmartUpdate installs two repositories on the Security Management server:

1.

License and Contract Repository, which is stored on all platforms in the directory \$FWDIR/conf.

2.

Package Repository, which is stored: - on Windows machines in C:\SUroot.

- on UNIX machines in /var/suroot. The Package Repository requires a separate license, in addition to the license for the Security Management server. This license should stipulate the number of nodes that can be managed in the Package Repository. Reference:
