-  **800,000+** Satisfied Customers

QUESTION 1

Why does using Workflow Studio help manage the image release process?

- A. Because it can script automatic upgrades of the deployment template
- B. Because it provides centralized, automated single image management
- C. Because it facilitates consistent deployment of base images
- D. Because Workflow Studio scripts can be executed from the same network share as the deployment template

Correct Answer: B

QUESTION 2

Why should two of each component be located at the London datacenter?

- A. Because it allows for Inter and Intra site high availability
- B. Because it increases security for remote access
- C. Because two components at each datacenter allow for increased user performance
- D. Because user experience will NOT be affected in the event of a site outage

Correct Answer: A

QUESTION 3

Why does Provisioning Services with cache on server help the Radiology group maintain changes in their desktops?

- A. Because it is stored centrally
- B. Because it reduces XenServer shared storage consumption
- C. Because Profile Manager provides a consistent user experience
- D. Because it reduces storage IO on the XenServer local storage

Correct Answer: A

QUESTION 4

The company's security compliance policy requires that remote access is logged for auditing purposes.

Which data sources should be captured?

- A. NetScaler logs, StoreFront logs, and Citrix Director database

- B. Configuration Logging database, NetScaler logs, and Citrix Director database
- C. StoreFront logs, System Event logs, and firewall logs
- D. Configuration Logging database, firewall logs, and Application Event log

Correct Answer: A

QUESTION 5

Why is this the best design for the XenServer resource pools?

- A. This design ensures that all server workloads and virtual desktop workloads are logically separated and do NOT interfere with each other. Furthermore, it ensures easier management and expansion capabilities.
- B. This design provides flexibility for all workloads to use available resources within a resource pool more efficiently and ensures expansion options if the environment should grow. Furthermore, performing a backup on a daily basis provides availability of critical workloads with some downtime.
- C. This design separates server workloads from virtual desktops according to the different resource usage characteristics and avoids conflicting situations. Also, critical database services have sufficient resources within their workload-specific resource pool and failover capabilities.
- D. This design ensures logical separation of all workloads and virtual desktops. Also, providing a backup solution reduces the risk of data loss and minimizes downtime.

Correct Answer: C
