100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Oracle
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

When working with InnoDB, which of the following is true when trying to create foreign key references?

- A. Only the child column must be indexed.
- B. Only the parent column must be indexed.
- C. Both the parent and child columns must be indexed.
- D. InnoDB will not create an index automatically.
- E. InnoDB may create an index automatically.

Correct Answer: CE

29.4.6. Using Foreign Keys

In a foreign key relationship, the referring column and the referenced column should have the same data type, and both must be indexed. (If the referring column has no index, InnoDB creates an index on it automatically.)

QUESTION 2

When making connections to a MySQL server on a Unix platform, which of the following is true?

- A. TCP/IP connections are faster than socket file connections.
- B. Socket file connections are faster than TCP/IP connections.
- C. TCP/IP and Socket file connections are equally as fast.

Correct Answer: B

23.2. Communication Protocols

On Unix, a Unix socket file connection provides better performance than a TCP/IP connection.

QUESTION 3

With MyISAM table locking, deadlocks do not occur because:

- A. All tables to be locked are sorted in an internally defined order
- B. If a table is locked with a read lock and a write lock, the write lock is set before the read lock
- C. Tables are locked one table at a time until the thread gets all the locks
- D. None of the above

Correct Answer: D

28.1. Locking Concepts

With table locking, the server can determine what locks are needed and acquire them before executing a statement, so deadlock never occurs.

QUESTION 4

Which of the following are requirements for InnoDB binary portability?

- A. Both machines must use the same operating system.
- B. Database and table names must use lowercase format.
- C. Both machines must use two's-complement integer arithmetic.
- D. Both machines must use IEEE floating-point format or contain no floating-point columns.

Correct Answer: BCD

29.4. The InnoDB Engine

The tablespace storage format is portable, so InnoDB files can be copied directly to another host and used by a server there. The conditions for InnoDB portability are given at Section 32.3.4.

32.3.4. Conditions for Binary Portability

MyISAM tables and InnoDB tablespaces are binary portable from one host to another if two conditions are met:

Both machines must use two's-complement integer arithmetic. Both machines must use IEEE floating-point format, or else the tables must contain no floating-point columns (FLOAT or DOUBLE). A third condition for InnoDB binary portability

is that you should use lowercase names for databases and tables.

QUESTION 5

In which of the following files must the base directory be specified if MySQL is not installed in the default directory for the platform?

- A. config.cnf
- B. config.ini
- C. my.cnf
- D. my.ini
- E. basedir.cnf
- F. basedir.ini

Correct Answer: CD

24.4. Runtime MySQL Configuration If you install MySQL on Windows, the server assumes by default that the installation directory is C:\mysql and the data directory is named data in the installation directory. If you install MySQL somewhere else, such as E:\mysql, you must tell the server that location with a --basedir option. Options in option files are given without the leading dashes, so to indicate the installation directory, specify the option as follows:

```
[mysqld] basedir=E:/mysql
```
