QUESTION 1

Which three statements are true about the administration and use of policy sets in Oracle 12c Clusterware?

- A. All server pools in a cluster are controlled by the policy set, when user-defined policy management is used.
- B. Servers in a server pool outside the control of policy set are never affected by policy changes, when user-defined policy management is used.
- C. Clusterware administrators cannot directly modify the policy set when Quality of Service (QoS) Management is used.
- D. A server pool can have the same attributes defined for different policies in the policy set, when user- defined policy management is used.
- E. A server pool can have different attributes defined for different policies in the policy set, when user- defined policy management is used.

Correct Answer: ACE

Section: (none)

A: A cluster configuration policy set is a document that defines the names of all server pools configured for the cluster and definitions for all policies.

C: If you create policies with Oracle Database Quality of Service Management (Oracle Database QoS Management), then you categorize servers by setting server pool directive overrides, and CRSCTL commands using the policy and policyset nouns are disabled.

Note: Oracle Database 12c has introduced the policy sets, a feature that allows preparing in advance all the different workload scenarios and activating them with a single command. The easiest way to create policy sets is dumping the current configuration into a file, edit it, and reload it into the cluster.

QUESTION 2

You performed these steps to disable an ADVM volume containing an ACFS file system:

1.
Dismount the file system.
2.
Disable the volume with the ASMCMD voldisable command.

Which two statements are true regarding the actions performed? (Choose two.)

- A. The ACFS file system will be permanently removed from the volume.
- B. The ACFS mount registry with Oracle restart is automatically deleted.
- C. The volume can be enabled and the file system can be mounted back again to access the existing data.

- D. The ACFS file system will be permanently removed from the volume only if the file system is empty.
- E. The disabling of volume does not destroy data in the file system.

Correct Answer: CE

Section: (none)

QUESTION 3

You must deploy several Oracle 12c databases on an Oracle Grid Infrastructure Managed Cluster, and are required to have the ability to perform these actions without down time:

1.

Apply a Grid Infrastructure interim patch.

2.

Apply a Grid Infrastructure Patch Set Update (PSU).

3.

Apply a database on-line patch.

4.

Apply a Grid Infrastructure patchset.

5.

Apply a database patchset.

6.

Upgrade Grid Infrastructure from one release to another.

7.

Upgrade databases from one release to another. Your plan is to perform these tasks:

1.

Install and configure Oracle Grid Infrastructure on a local file system.

2.

Install Oracle Database software on an ACFS file system.

3.

Create several RAC One Node databases. Which of the 7 requirements are met by your plan?

A. 1, 2, 3, 4, 5, 6 and 7.

- B. 1, 2, 3, 4 and 6.
- C. 1, 2, 3, 4, 5 and 6.
- D. 1, 2, 3 and 4.
- E. 2, 3, 4 and 6.
- F. 2, 3, 4, 5 and 6.

Correct Answer: F

Section: (none)

QUESTION 4

Which three statements are true about Oracle Clusterware 12c Flex Cluster architecture?

- A. Each leaf node must be connected to storage shared across all cluster nodes.
- B. Hub nodes require direct access to the voting disks.
- C. Each leaf node must be connected to storage shared across all leaf nodes.
- D. Each hub node must be connected to storage shared across all hub nodes.
- E. Hub nodes require direct access to the OCR file.
- F. Leaf nodes require direct access to the voting disks.

Correct Answer: BED

Section: (none)

BE: In Oracle Flex Cluster, only Hub nodes will have direct access to the OCR/Voting disks.

D: The Leaf nodes are different from the Hub nodes. They don't need to have direct access to the underlying storage; rather they access the storage/data through Hub nodes. References: <http://allthingsoracle.com/oracle-database-12c-new-features-part-3/>

QUESTION 5

A Java application using thick JDBC connections will soon be deployed, and you must configure a RAC database to support highly available connections.

Broken connections must be re-established as quickly as possible.

Which feature will support this requirement?

- A. Fast Connection Failover (FCF) with Transparent Application Failover (TAF)
- B. Transparent Application Failover (TAF)

C. Transparent Application Failover (TAF) using Fast Application Notification (FAN)

D. Fast Connection Failover (FCF)

Correct Answer: C

Section: (none)

The Fast Connection Failover (FCF) feature is an Oracle RAC/Fast Application Notification (FAN) client implemented through the connection pool. The feature requires the use of an Oracle JDBC driver and an Oracle RAC database.
