QUESTION 1

Which three statements are true about ASM Cloud File System (ACFS) tagging?

- A. acfssettag is a command provided by a platform-independent API to tag files.
- B. acfssettag is a command provided by a platform-dependent API to tag files.
- C. ACFS tagging is used to mark a subset of files in an ACFS file system for replication.
- D. acfsutil encr on can be used to specify the tag names of the files to be encrypted.
- E. acfsutil tag set can be used to tag files.

Correct Answer: ACE

Section: (none)

A: The acfssettag command sets the tag name on an Oracle ACFS file.

Syntax

```
sb8 acfssettag(const oratext *path, const oratext *tagname, oratext *value, size_t size, ub4 flags);
```

C: Oracle ACFS tagging assigns a common naming attribute to a group of files. Oracle ACFS Replication can use this tag to select files with a unique tag name for replication to a different remote cluster site. The tagging option avoids having

to replicate an entire Oracle ACFS file system.

E: The acfsutil tag set command adds the given tag to the specified files or directories in an Oracle ACFS file system.
Incorrect Answers:

D: The acfsutil encr on command encrypts an Oracle ACFS file system, directories, or individual files. However, you specify a directory not a tag name.
