QUESTION 1

Which two statements are true regarding Oracle database space management within blocks managed by Automatic Segment Space Management (ASSM)? (Choose two.)

- A. PCTFREE defaults to 10% for all blocks in all segments for all compression methods
- B. ASSM assigns blocks to one of four fullness categories based on what percentage of the block is allocated for rows
- C. Update operations always attempt to find blocks with free space appropriate to the length of the row being updated
- D. Insert operations always attempt to find blocks with free space appropriate to the length of the row being inserted
- E. A block will always be eligible for inserts if the row is short enough to fit into the block

Correct Answer: BD

Characteristics of Bitmap Segment Management

Bitmap space management uses four bits inside each data block header to indicate the amount of available space in the data block. Unlike traditional space management with a fixed relink and unlink threshold, bitmap space managements allow Oracle to compare the actual row space for an INSERT with the actual available space on the data block. This enables better reuse of the available free space especially for objects with rows of highly varying size. Here are the values inside the four-bit space:

1.

Value Meaning

2.

0000 Unformatted Block

3.

0001 Block is logically full

4.

0010 25% but 50% but 75% free space

Table 1: Bitmap value meanings.

QUESTION 2

You want to apply the principle of Least Privilege in all your live databases.

One of your requirements is to revoke unnecessary privileges from all users who have them using Privilege Analysis.

Which three types of analyses can be done using the DBMS_PRIVILEGE_CAPTURE package? (Choose three.)

- A. analysis of all privileges used by all users including administrative users in the database

- B. analysis of all privileges used by all users but excluding administrative users in the database
- C. analysis of privileges that a user has on their own schema objects that they did not use
- D. analysis of privileges that a user has on their own schema objects that they did use
- E. analysis of privileges granted directly to a role that are then used by a user who has been granted that role
- F. analysis of privileges granted indirectly to a role that are then used by a user who has been granted that role

Correct Answer: AEF

A - Right - We can analyze the administrative user, the oracle just excludes the SYS user B - Wrong, oracle does not delete administrative user, like question A, only SYS user C - Wrong - We cannot analyze the permission of the scheme itself D - Wrong - We cannot analyze the privilege of our schema E - Right - we can analyze the permission that was given directly. F - Right - we can analyze the permission that was given Reference:
https://docs.oracle.com/database/121/ARPLS/d_priv_prof.htm#ARPLS74328

QUESTION 3

The ORCL database has RESUMABLE__TIMEOUT = 7200 and DEFERRED_SEGMENT_CREATION = FALSE

User U1 has a 1 MB quota in tablespace DATA.

U1 executes this command:

```
SQL> CREATE TABLE t1 AS
```

```
(SELECT object_name, sharing, created
```

```
FROM dba_objects);
```

U1 complains that the command is taking too long to execute.

In the alert log, the database administrator (DBA) finds this:

```
2017-03-06T12:15:17.183438+05:30
```

```
statement in resumable session `User U1(136), Session 1, Instance 1` was suspended due to ORA-01536:  
space quota exceeded for tablespace `DATA`
```

Which are three actions any one of which the DBA could take to resume the session? (Choose three.)

- A. Add a data file to DATA
- B. Drop other U1 objects in DATA
- C. Increase U1's quota sufficiently in DATA
- D. Set DEFERRED_SEGMENT_CREATION to TRUE
- E. Grant UNLIMITED TABLESPACE to U1

F. Set AUTOEXTEND ON for data files in DATA

Correct Answer: BCE

Set DEFERRED_SEGMENT_CREATION to TRUE, when creating the table you are already inserting rows as select, therefore the segment has already been created the D is not.

Configure Set AUTOEXTEND ON for data files in DATA, if you have 1M quota it will not work.

- A. Add a data file to DATA -- Won't help as problem is quota to user not the space
- B. Drop other U1 objects in DATA -- Will help as it will reduce the used space from quota for that user
- C. Increase U1's quota sufficiently in DATA -- Will help.
- D. Set DEFERRED_SEGMENT_CREATION to TRUE -- Won't help, segments has to be created as its CTAS
- E. Grant UNLIMITED TABLESPACE to U1 -- Will help.
- F. Set AUTOEXTEND ON for data files in DATA -- Won't help as problem is quota to user not the space

QUESTION 4

View the Exhibits and examine the structure of the COSTS and PROMOTIONS tables.

You want to display PROD_IDS whose promotion cost is less than the highest cost PROD_ID in a promotion time interval.

Examine this SQL statement:

```
SELECT prod_id
FROM costs
WHERE promo_id IN
  (SELECT promo_id
   FROM promotions
   WHERE promo_cost < ALL
     (SELECT MAX(promo_cost)
      FROM promotions
      GROUP BY (promo_end_date - promo_begin_date)));
```

Exhibit 1.

Table COSTS		
Name	Null?	Type
PROD_ID	NOT NULL	NUMBER
TIME_ID	NOT NULL	DATE
PROMO_ID	NOT NULL	NUMBER
CHANNEL_ID	NOT NULL	NUMBER
UNIT_COST	NOT NULL	NUMBER(10,2)
UNIT_PRICE	NOT NULL	NUMBER(10,2)

Exhibit 2.

Table PROMOTIONS		
Name	Null?	Type
PROMO_ID	NOT NULL	NUMBER(6)
PROMO_NAME	NOT NULL	VARCHAR2(30)
PROMO_SUBCATEGORY	NOT NULL	VARCHAR2(30)
PROMO_SUBCATEGORY_ID	NOT NULL	NUMBER
PROMO_CATEGORY	NOT NULL	VARCHAR2(30)
PROMO_CATEGORY_ID	NOT NULL	NUMBER
PROMO_COST	NOT NULL	NUMBER(10,2)
PROMO_BEGIN_DATE	NOT NULL	DATE
PROMO_END_DATE	NOT NULL	DATE

What will be the result?

- A. It gives an error because the ALL keyword is not valid
- B. It gives an error because the GROUP BY clause is not valid
- C. It executes successfully but does not give the required result
- D. It executes successfully and gives the required result

Correct Answer: C

(promo_end_date - promo_begin_date) is returning the number of days which the promotion was running, but no interval, which is requested by the question. so logically the query is not generating desired output.

QUESTION 5

Which three statements are true about the Oracle Data Dictionary? (Choose three.)

- A. Data dictionary views are created by joins of dictionary base tables and DBA-defined tables
- B. The data dictionary is created and maintained by the database administrator
- C. Views with the same name but different prefixes, such as CDB, DBA, ALL and USER, reference the same base tables from the data dictionary
- D. Base tables can be queried directly
- E. It is owned by the SYSTEM user
- F. Usernames of all users including database administrators are stored in the data dictionary

Correct Answer: CDF

https://docs.oracle.com/cd/B28359_01/server.111/b28318/datadict.htm#CNCPT1210
