QUESTION 1

When you provision a WebLogic Server for OCI 12c JRF instance from Marketplace into a new environment, which OCI component is not provisioned?

- A. Virtual Cloud Network (VCN)
- B. Subnet for WebLogic and optional Load Balancer
- C. Compartment
- D. Security List with all the security rules for ports required for WLS

Correct Answer: B

QUESTION 2

Which Cloud service provides you with the ability to run container clusters on top of Oracle's Cloud Infrastructure?

- A. Oracle WebLogic Server for OCI
- B. Oracle Blockchain
- C. Oracle Cloud Infrastructure Registry
- D. Oracle Container Engine for Kubernetes

Correct Answer: D

QUESTION 3

Which two statements are true about Fn Context?

- A. You cannot configure multiple contexts for your function development.
- B. Fn Context stores the information related to API URL and registry.
- C. The default context is created during the first run of the Fn CLI.
- D. Fn Context does not support local development.

Correct Answer: BC

QUESTION 4

Which two statements are true about accessing cloud-based storage through the storage API?

- A. It is a convenient way of storing data that is specific to your mobile application without having to go back to your backend systems to store it.

- B. All data retrieved from backend applications must be stored by the storage API in order to be consumed by the mobile application.
- C. It can act as a replacement for an Oracle Database instance, since it resides locally in the Mobile Hub environment.
- D. It is the principal way of retrieving data from backend, on-premises systems.
- E. It can make it easier to resume multi-step operations across devices by storing a user's progress.

Correct Answer: AD

QUESTION 5

You have deployed a Visual Builder Studio application and shared its URL with the enterprise. The enterprise gives feedback that the deployment is incorrect and does not meet their requirement specifications regarding the URL definition. Even though the application works as expected, they are insisting that you make corrections to meet their specified requirements. What capabilities in Visual Builder Studio deployment activities would you use to meet this customer requirement?

- A. Undeploy the incorrect version of the application and then redeploy with a custom URL for the deployed application.
- B. Deploy the applications to display a version number or the word "ACTIVE" in the URL of the web application.
- C. Set up the Visual Builder deployment to install the application on an on-premises server in the enterprise's data center.
- D. Deploy a new version of the application with corrections and have both versions available at the same time.

Correct Answer: C
