QUESTION 1

You see a script called start WebLogic.sh(.cmd in Windows) in the root folder of your domain.

What does this script do?

- A. Starts a machine
- B. Starts Node Manager
- C. Starts a Managed server
- D. Calls the startwebLogic.sh script in the domain\\'s bin directory
- E. Calls the startManagedWebLogic.sh script in the domains bin directory

Correct Answer: D

QUESTION 2

Each domain has a directory called servers that contains subdirectories for each server in the domain. Your domain has a managed server managed managed1.

When will the managed1 directory be created?

- A. When the managed1 server is defined in the Configuration WIZARD
- B. When the domain is created
- C. When the Administration server comes up for the first time
- D. When the managed1 server comes up for the first time

Correct Answer: D

QUESTION 3

Which three statements are true about WebLogic clusters?

- A. Clusters provide clients with transparent failover.
- B. EJB applications can be targeted to entire cluster.
- C. All cluster members must bind to the same port number.
- D. Cluster members replicate application data by using heartbeats.
- E. Cluster members can be associated with one or more domains.

F. Web applications require a proxy in order to be used in a cluster.

Correct Answer: ABF

QUESTION 4

You are using WebLogic Server Diagnostic Framework (WLDF) Instrumentation in a system diagnostic module. The Dye Injection monitor is enabled. You know the diagnostic context ID of the request you are interested in that was processed by several. You are looking through the messages in the server log file of several.

Which statement is true?

- A. You need to look at the Events Data Archive. Server log files do not contain WL DF context IDs
- B. You need to look at the Harvested Data Archive. Server log files do not contain WL DF context IDs.
- C. You need to look at the domain log file. Only the domain log file contains WL DF context IDs.
- D. You can search the server log file for the context ID. Any message that was written to the log IDs during that request will contain the context ID.
- E. You need to translate the context ID into the corresponding transaction ID, which is the only ID in server log file entries.

Correct Answer: A

QUESTION 5

Which session persistence type is invalid?

- A. Async_replicated
- B. async_jdbc
- C. replicated
- D. async_memory
- E. cookie
- F. file
- G. replicated_if_clustered

Correct Answer: D
