QUESTION 1

Which MAF application artifact must the developer select to deploy a Feature Archive?

- A. ApplicationController project
- B. maf-feature.xmlfile
- C. entire application workspace
- D. ViewController project

Correct Answer: B

<https://docs.oracle.com/middleware/maf210/mobile/develop-maf/maf-apps-get-started.htm#ADFMF25136>

(2.6.3)

QUESTION 2

You are debugging an MAF application. The application stores the total cost of items in the user's shopping cart in a managed bean variable. The total cost is then displayed in an AMX page via `anamx:outputTextcomponent`. A button is pressed on the page to add another item to the shopping cart, and, as a result, the total cost value is changed in the managed bean. However, you notice that the value is not changed in the AMX page.

Which is the reason for this behavior?

- A. The total cost variable does not have a `PropertyChangeListener` firing on data change.
- B. The scope of the managed bean is `pageFlowScope`.
- C. The variable is an `int` instead of a `double`.
- D. The `anamx:outputText` `partialTrigger` property must include the ID of the `anamx:commandButton` that is invoking the change.

Correct Answer: D

QUESTION 3

A service developer is creating a service that will be used by mobile clients. Which piece of advice should the developer consider while designing it?

- A. Design for next generation interfaces to ensure that their services will not need to change in the future.
- B. Carefully choose the implementation language and the monitoring capabilities.
- C. Consider the interface types, payloads types, and security approaches which are easily consumed by mobile devices.
- D. Create services that are arcane in nature to enhance the security of the services.

Correct Answer: C

QUESTION 4

Identify two characteristics of a responsive mobile application design.

- A. adjusts the back-end access to services based on the protocol being used
- B. adjusts the mobile UI based on the device orientation
- C. responds to user gestures such as tap and hold or swipe
- D. adjusts the mobile UI based on screen size
- E. immediately responds to changes the user makes to a field value in the UI layer.

Correct Answer: CE

QUESTION 5

Which statement is true about consolidating data queried from a SOAP web service and a REST-JSON web service locally on the MAF client so that it can be exposed in a single data control?

- A. The SOAP web service returns an XML response, whereas the REST service (as per the question) returns a JSON response. The two cannot be combined in a unified data control exposure.
- B. SOAP web services and REST web services with a JSON response (as per the question) can each be transformed in data objects stored in data services. A Java layer on top can be used to expose the information on a single data control interface.
- C. Data queried from different web service sources and web service types must be transformed and consolidated on the remote server to ensure unique keys and payloads.
- D. REST web services with a JSON payload (as per the question) can be accessed from the SOAP data control. The framework automatically converts the JSON string schema to an XML structure.

Correct Answer: D

<https://docs.oracle.com/middleware/maf210/mobile/develop/maf-web-services.htm>
