QUESTION 1

Service mediation is defined as a(n) _____.

A. architecture that mediates between the service consumers and one or more service providers in a manner that loosely couples location, interface, data, and security

B. technique that loosely couples programming languages

C. methodology for mediating between interfaces and concrete instances

D. product that automatically provides for abstraction between service consumers and service providers

Correct Answer: B

QUESTION 2

You have been asked to select the appropriate security policy to apply to a SOAP web service data control. The web service is accessed over HTTPS. In addition,the web service calls must use the same single sign-on infrastructure as the other web applications deployed on the network. That way, users will not have to authenticate again if they navigate between remote URL features and AMX features making web service calls.

Which policy would you choose?

A. oracle/wss_http_token_over_ssl_client_policy

B. oracle/wss_username_token_client_policy

C. oracle/soap_over_ssl_client_policy

D. oracle/wss11_message_protection_client_policy

Correct Answer: A

QUESTION 3

Which statement is true about the Configuration Service?

A. MAF provides a set of APIs within the oracle.adfmf.config.client.ConfigurationServiceclass that allows you to check for new changes on the server and downloadupdates to an application\\'s configuration.

B. The Configuration Service is a custom RESTFul web service that you must implement yourself according to a specification provided by Oracle.

C. When a MAF application is configured to use the Configuration Service, it displays an Oracle-provided dialog at startup where the user must enter a user name, a password, and the URL to theConfiguration Server.

D. The Configuration Server is provided by the Oracle Mobile Cloud Service and cannot be deployed on your own servers.

Correct Answer: A

MAF provides a set of APIs within the oracle.adfmf.config.client.ConfigurationService class that allow to check for new changes on the server and download the updates. You can use these APIs in a Java bean to activate the respective methods through the Configuration Service application feature.
