**QUESTION 1**

Which is NOT needed to manage Oracle Autonomous Database with REST APIS?

- A. User\`s OCID
- B. Tenancy\`s OCID
- C. Database ADMIN password
- D. Fingerprint of the public key

Correct Answer: C

---

**QUESTION 2**

Data Guard is enabled for your Autonomous Database and the Lifecycle State field for the primary database indicates that it is stopped.

Which statement is true?

- A. The standby database is terminated.
- B. The standby database is also stopped.
- C. Switchover is automatically initiated.
- D. Failover is automatically initiated.

Correct Answer: B

---

**QUESTION 3**

Which statement is correct about managing and monitoring of Autonomous Database?

- A. You can use Service console to move Autonomous DB between compartments.
- B. You can use Service console to create manual backups of Autonomous database.
- C. You can use Service console to enable or disable auto scaling of Autonomous DB.
- D. You can use Service console to manage runaway SQL statements on Autonomous DB.

Correct Answer: D

<https://docs.oracle.com/en/cloud/paas/autonomous-database/adbsa/manage-sql-statements.html#GUID4861BA7F-F9FA-4909-8DC0-4F46AFF80706>

---

#### QUESTION 4

Your customer has upgraded their on premise 11.2 database to 12.2. During this migration the database was migrated to a pluggable database and is now in production. How should the customer unplug their database to migrate to Autonomous Database (ADB)?

- A. Pluggable databases cannot be migrated to ADB using plug, unplug or clone.
- B. Create a database link from source database to the ADB environment and clone the PDB.
- C. Unplug to an xml file so database files and xml file can be uploaded to object storage.
- D. Unplug into a pdb archive which can be uploaded to object storage.

Correct Answer: A

Since an ADB database has some restrictions on the object types and Oracle Database Options you need to use a logical migration method rather than a physical one.

The main migration tool for migrating to ADB is Data Pump. You can export your schemas and import them into ADB using Data Pump. To sync up the additional/incremental changes on the source database during the export/import process you can use GoldenGate or GoldenGate Cloud Service to replicate those changes to ADB.

In the current release you cannot use physical migration methods like backup/restore, Data Guard, Pluggable/Unplug, database clones, and transportable tablespaces to move your existing database to ADB.

---

#### QUESTION 5

A customer wants to increase the throughput of their inserts. They have discovered that the bottleneck is in the storage I/Os of their environment.

What should they do to remove this bottleneck?

- A. Run the DBMS\_CLOUD.INCREASE\_THROUGHPUT procedure.
- B. Remove any non-JSON data from the database.
- C. Increase the number of OCPUs allocated to the database.
- D. Ask Support to migrate their setup to a node without noisy neighbors.

Correct Answer: D
