100% Passing Guarantee 100% Money Back Assurance

Following Questions and Answers are all new published by Oracle Official Exam Center

Instant Download After Purchase

- 100% Money Back Guarantee
- 😳 365 Days Free Update
- 800,000+ Satisfied Customers

QUESTION 1

Your client has the following requirements:

Many customers are installing their own solar electrical generation equipment. When these customers generate more electricity than required for their own use, the surplus can he exported back to the power grid.

In order to measure this generation, we have installed special scalar devices. These devices have separate registers to measure the energy generated (export) and the energy received (import) from the National Grid. Both reads will be stored in kWh, but the import is subtractive and export is consumptive.

What solution should you choose to configure the measuring component types for these specific requirements?

A. Create two service points: one for subtractive import and the other for consumptive export.

B. Create one new measuring component type for creating two measuring components (one for import and the other for export) that will be linked to one scalar device.

C. Create one new measuring component type for creating a new measuring component that will be linked to two different scalar devices (one for import and the other for export).

D. Create two new measuring component types (one for subtractive import and the other for consumptive export) to enable the creation of two measuring components that will be linked to one scalar device.

Correct Answer: D

QUESTION 2

Which two plug-in spots can call the rating functionality using base package-supplied algorithm types? (Choose two.)

- A. Adjustment Type Adjustment FT Creation
- B. Billable Charge Template
- C. Bill Segment Type Bill Segment Create
- D. Adjustment Type Generate
- E. Bill Segment Type Bill Segment FT Creation

Correct Answer: AE

QUESTION 3

Which three statements are correct for Adjustment Types? (Choose three.)

- A. They can default an Adjustment Amount to adjustments.
- B. They control how adjustments appear on bills.
- C. They control whether a rate is to be called to calculate an adjustment amount.

- D. They control the valid Service Agreement Types that adjustments can be linked to.
- E. They control the valid Adjustment Profiles that adjustment types can belong to.

Correct Answer: BCD

QUESTION 4

Usage transactions can contain date breaks. Which is used to supply date breaks?

- A. the Deferred Monitor Calculation Algorithm
- B. the Usage Subscription Type
- C. the requesting system or user input
- D. the Usage Subscription BO

Correct Answer: B

QUESTION 5

Which configuration steps are required to derive loss-adjusted kWh on a measuring component based on a loss factor value related to a service point?

A. Configure a Service Point Characteristic Type and derivation algorithm, and then associate the algorithm to the Measuring Component Type and the characteristic value to the service point.

B. Configure an SQI and the derivation algorithm, and then associate the algorithm to the Measuring Component Type and SQI to the service point.

C. Configure a factor and derivation algorithm, and then associate the factor to the Measuring Component Type and the derivation algorithm to the service point.

D. Configure a factor and derivation algorithm, and then associate both to the Measuring Component Type and service point.

E. Configure a Service Point Characteristic Type, factor, derivation algorithm, and Service Quantity Identifier (SQI), and then associate the SQI and derivation algorithm to the Measuring Component Type and the characteristic value to the service point.

Correct Answer: B
