### QUESTION 1

During Vblock System 320 testing, one of your ESXi 5.1 servers has lost connectivity with vCenter. Which log file would first be used to troubleshoot this problem?

- A. varlogmessages
- B. varlogvmkernel.log
- C. varlogvmwarning.log
- D. varlogvmksummary.log

Correct Answer: B

---

### QUESTION 2

According to the VCE Logical Build Guide, what is the recommended installation location for VMware Update Manager and its database in a Vblock System?

- A. Install the application and database on the vCenter server.
- B. Install the application and database on a standalone server.
- C. Install the application on the vCenter server and the database on a dedicated SQL server.
- D. Install the application on a standalone server and the database on a shared SQL server.

Correct Answer: D

---

### QUESTION 3

A vApp has been deployed with the wrong IP address information and must be updated. You have logged into the virtual machine, and updated the static IP address from the console, validating connectivity. After a system reboot, users are no longer able to connect to the system.

What is the problem?

- A. The IP configuration should take place in the vApp container.
- B. vApps require DHCP assigned addresses instead of static.
- C. The segment ID was incorrectly configured for the VXLAN.
- D. The IP configuration should take place in the vSwitch layer.

Correct Answer: A

---

**QUESTION 4**

Which two methods would you use to deploy an ESXi image created with Image Builder CLI? (Choose two.)

- A. using Symantec Ghost
- B. using a USB drive
- C. burning it to an installaton DVD
- D. using the Auto Deploy feature in vCenter Server

Correct Answer: CD

---

**QUESTION 5**

A VM on the Vblock System 320 is unable to communicate on the customer network. When examining the virtual machine, you notice it has the same port group as the other VMs on the same ESXi server. Which action must you perform to resolve the problem?

- A. You must reboot the VM.
- B. You must restart the network agents on the ESX server.
- C. You must verify that the VM's network adapter is connected.
- D. You must install the Nexus 1000V agent on the virtual machine.

Correct Answer: C
