QUESTION 1

You are deploying a new business critical application that cannot have any down time. The new business application does not support clustering and you decide to implement VMware Fault Tolerance. Which two configurations must be in place to support the business application? (Choose two)

- A. The virtual machine is configured with 1 vCPU.
- B. The virtual machine is configured with raw device mappings for storage.
- C. The ESXi host is configured with a data store heartbeat for fault tolerance.
- D. The ESXi host is configured with a kernel port for fault tolerance logging.

Correct Answer: AD

QUESTION 2

You are asked to add a new ESXi host to an existing VMware cluster. You identify an available blade with the same specifications.

Which statement is a VCE recommendation?

- A. Hosts in a VMware cluster should each belong to a different VSAN.
- B. Service profiles in a VMware cluster should be kept on as few chassis as possible.
- C. Service profiles in a VMware cluster should be spread out over as many Vblock® Systems as possible.
- D. Hosts in a VMware cluster should always belong to the same service profile template.

Correct Answer: D

QUESTION 3

You have added physical disks to your Vblock® System 720 to a physical disk group and then created data devices.

What must you do to see the new capacity?

- A. Add the devices to the masking group.
- B. Map the devices to the front end ports.
- C. Add the devices to the thin pool and enable them.
- D. Add the devices to the FAST VP policy.

Correct Answer: C

QUESTION 4

A new Vblock® System 720 customer is interested in managing initiator groups and monitoring virtual provisioning.

Which element manager would you recommend?

- A. VCE Vision™ Intelligent Operations
- B. Unisphere
- C. UCSM
- D. Data Center Network Manager

Correct Answer: B

QUESTION 5

You are making some changes in connectivity in your network layer and are concerned about the port licensing on your Fabric Interconnect.

If you disable a port, which statement is true?

- A. You must log into the Fabric Interconnect to de-authorize the license assigned to that port.
- B. You must edit the license file on the Fabric Interconnect to specify which license is now free.
- C. The licenses are dynamically added back to the license pool.
- D. You must force a license rescan on your UCS to recapture the license.

Correct Answer: C
