QUESTION 1

Refer to the exhibit.

The Global Intelligence Network Of WebPulse service classifies .1 website as "Entertainment; Mumor/tokes." The current configuration of PacketShaper has traffic discovery enabled within the Inbound/HTTP class and has the class tree shown as in the exhibit with WebPulse enabled.

What two (2) classes will the traffic flow into when the client makes a request to the website in question?

(Select two)

- A. Inbound/Local host
- B. inbound/Entertainment
- C. Inbound/HTTP/Default

D. Inbound/HTTP/Entertainment

E. Inbound/Humor_jotes

Correct Answer: AD

QUESTION 2

Which control limits the number of simultaneous TCP flows in a class?

A. class licenses

B. policy delay bound

C. system limits

D. policy flowlimit

Correct Answer: B

QUESTION 3

Why would an administrator configure the failover feature in PacketShaper Guided Setup?

A. To enforce policies to react to a new link speed when the primary WAN link fails

B. To configure advanced system settings, such as Packet Engine, auto discovery, and dynamic partitions

C. To configure PacketShaper for use with WCCP when the primary WAN link fails

D. To schedule commands to execute at a specific time or on a recurring basis

Correct Answer: B

QUESTION 4

The class licenses CLI command has been used to set a maximum number of flows for a specific class.

After the maximum number of defined flows for ibis class is active, a new flow begins.

Which policy would be applied to the new flow?

A. Default Policy

B. Never-Admit Policy

C. Admission Control Policy

D. Overflow Policy

Correct Answer: A

QUESTION 5

What condition would signal an administrator to track class response time?

A. When the associated traffic is UDP and conforms to recognized transaction behavior

B. When a network is unreliable or unstable more than 50% of the time

C. When network retransmission rates are close to zero

D. When the associated traffic is TCP and conforms to recognized transaction behavior

Correct Answer: D
