### QUESTION 1

What is the command to list multipathing modules on an ESXi 6.x host?

- A. esxcli storage core list plugin --plugin-class=MP
- B. esxcli storage core list plugin --class-plugin=MP
- C. esxcli storage core plugin list --plugin-class=MP
- D. esxcli storage core plugin list --class-plugin=MP

Correct Answer: C

Reference: <http://darrylcauldwell.com/advanced-vsphere-5-x-storage-masking-multipathing-filtering/>

---

### QUESTION 2

An administrator has created a resource pool named Marketing HTTP with a Memory Limit of 24 GB and a CPU Limit of 10,000 MHz.

The Marketing HTTP resource pool contains three virtual machines:

Mktg-SQL has a memory reservation of 16 GB.

Mktg-App has a memory reservation of 6 GB.

Mktg-Web has a memory reservation of 4 GB.

What would happen if all three virtual machines are powered on?

- A. All three virtual machines can power on, but will have memory contention.
- B. All three virtual machines can power on without memory contention.
- C. Only two of the three virtual machines can power on.
- D. Only one of the virtual machines can power on.

Correct Answer: C

Since the limit of 24 GB and CPU limit of 10,000 MH is enforced, only two of the virtual machines can power on simultaneously.

---

### QUESTION 3

Which three Authorization types are valid in vSphere? (Choose three.)

- A. Group Membership in vsphere.local
- B. Global

- C. Forest
- D. vCenter Server
- E. Group Membership in system-domain

Correct Answer: ABD

Sphere 6.0 and later allows privileged users to give other users permissions to perform tasks in the following ways. These approaches are, for the most part, mutually exclusive; however, you can assign use global permissions to authorize certain users for all solution, and local vCenter Server permissions to authorize other users for individual vCenter Server systems. vCenter ServerPermissions The permission model for vCenter Server systems relies on assigning permissions to objects in the object hierarchy of thatvCenter Server. Each permission gives one user or group a set of privileges, that is, a role for a selected object. For example, you can select an ESXi host and assign a role to a group of users to give those users the corresponding privileges on that host. Global Permissions Global permissions are applied to a global root object that spans solutions. For example, if both vCenter Server and vCenter Orchestrator are installed, you can give permissions to all objects in both object hierarchies using global permissions. Global permissions are replicated across the vsphere.local domain. Global permissions to not provide authorization for services managed through vsphere.local groups. See Global Permissions. Group Membership in vsphere.local Groups The user administrator@vsphere.local can perform tasks that are associated with services included with the Platform Services Controller. In addition, members of a vsphere.local group can perform the corresponding task. For example, you can perform license management if you are a member of the LicenseService.Administrators group. See Groups in the vsphere.local Domain.

#### QUESTION 4

When troubleshooting a performance related issue, an administrator sees the following warning message on an ESXi Console:

Significant imbalance between NUMA nodes detected. Performance may be impacted.

Which action should the administrator take to correct this problem?

- A. Ensure that the RAM modules are evenly balanced between processor sockets in the physical server.
- B. Ensure that all memory banks associated with CPU Socket 0 in the physical server are completely filled.
- C. Ensure that the physical server has the maximum amount of RAM modules that it can support.
- D. Ensure that all RAM modules in the host are Error-correcting code (ECC) modules.

Correct Answer: A

---

#### QUESTION 5

Which two conditions would prevent an administrator from upgrading an existing vCenter Appliance to vSphere 6.x?

(Choose two.)

- A. The appliance has been configured to use an external Single Sign-On server.
- B. The administrator did not export the appliance configuration.
- C. The administrator is using an appliance with an embedded Platform Services Controller.
- D. The ESXi Host that the appliance will run on has not been placed into Maintenance Mode.

Correct Answer: AB
