**QUESTION 1**

A company is Multi-Homed to different service providers running BGP. Which action ensures that the company AS does not become a transit AS?

- A. Create a distribute list that filters all routes except the default route and applies to both BGP neighbour interfaces in the inbound direction
- B. Create a distribute list that filters all routes except the default route and applies to a single BGP neighbour in the outbound direction
- C. Create prefix list that matches the company prefixes and applies to both BGP neighbour definitions in the outbound direction.
- D. Create a route map that matches the provider BGP communities and networks and applies to both transit neighbour interfaces in the outbound direction.

Correct Answer: C

QUESTION 2

Which two of these are correct regarding the recommended practice for distribution layer design? (Choose two.)

- A. use a redundant link to the core
- B. use a Layer 2 link between distribution switches
- C. never use a redundant link to the core because of convergence issues
- D. use a Layer 3 link between distribution switches with route summarization
- E. use a Layer 3 link between distribution switches without route summarization

Correct Answer: AE

We need to summarize from distribution to core but not between distribution switches.

QUESTION 3

Which option is the preferred and most versatile model to deploy IPv6 in existing IPv4 environments?

- A. hybrid
- B. service block
- C. dual stack
- D. processes

Correct Answer: C

QUESTION 4

From a design perspective which two of the following OSPF statements are most relevant? (Choose two)

- A. OSPF stub areas can be thought of as a simple form of summarization
- B. OSPF cannot filter intra-area routes
- C. An ABR can only exist in two areas - the backbone and one adjacent area
- D. Performance issues in the Backbone area can be offset by allowing some traffic to transit a non-backbone area
- E. The size of an area (the LSDB) will be constrained by the size of the IP MTU

Correct Answer: AB

QUESTION 5

A company wants to configure BGP on a router so that other BGP neighbors cannot influence the path of a particular route .which action must be taken to accomplish this configuration ?

- A. Configure a low router ID for the route
- B. Configure a high local preference for the route
- C. Configure a high weight for the route
- D. Configure a low MED for the route

Correct Answer: B
