**QUESTION 1**

An administrator is replacing an IOM. The failed IOM is in chassis 1 and was connected to FI-B. The replacement IOM has an older version of software to the fabric interconnect. Which description is the correct process to bring the replacement IOM into the environment?

- A. Decommission the chassis. Install the replacement IOM and connect all cables. Perform a firmware update of IOM, then activate with the matching code for the fabric interconnect. Recommission the chassis.
- B. Install the replacement IOM and connect a single cable. Perform a firmware update of IOM, then activate with the matching code for fabric interconnect. Reacknowledge the chassis.
- C. Downgrade the fabric interconnect to match the IOM version. Connect all cables and bring the IOM online. Upgrade the fabric interconnect and IOM to match the system.
- D. Install the replacement IOM and connect a single cable. Monitor the software auto-upgrade using the show fex detail command from Cisco NX-OS CLI. Connect the remaining cables when the upgrade is complete.
- E. Install replacement IOM and connect all cables. Monitor software auto-upgrade using the show fex detail command from Cisco NX-OS CLI.

Correct Answer: E

QUESTION 2

Which statement about switch policies and leaf profiles in the ACI Fabric is true?

- A. Switch leaf profiles are configured under Fabric > Fabric Policies.
- B. Leaf and spine profiles can be part of the same switch policy switch profile when the ports on the leafs and spines have similar characteristics.
- C. Each leaf profile in the ACI fabric must have a unique policy that identifies each single leaf.
- D. Manually configuring leaf profiles is not required because they are dynamically configured after new devices come online that are connected to the front panel ports of the leaf.
- E. Leaf profiles are associated to interface selector profiles that identify ports on the leaf.

Correct Answer: E

QUESTION 3

In OpenStack, which two statements about the NOVA component are true? (Choose two.)

- A. It launches virtual machine instances.
- B. It is considered the cloud computing fabric controller.
- C. It provides persistent block storage to running instances of virtual machines.

- D. It tracks cloud usage statistics for billing purposes.
- E. It provides the authentication and authorization services.

Correct Answer: AB

QUESTION 4

Drag and drop the MST Spanning tree protocol standards from left onto the correct characteristics on the right.

Select and Place:

region	ability to map VLANs to a single spanning tree instance
revision level	unique two byte numeric value used as an attribute to define a region
boundary port	attaches a MST Bridge to a LAN that is not in the same region
boundary switch	CIST Regional Root elected based on the shortest external path cost to the CIST Root
virtual bridge	allows for details of the MST regions to be hidden from switches outside the region

Correct Answer:

- boundary switch
- revision level
- boundary port
- virtual bridge
- region

QUESTION 5

After VTEP devices have established BGP neighbor adjacencies with other VTEPs or with Internal BGP route reflectors, which three pieces of information are exchanged through BGP? (Choose three.)

- A. VTEP address
- B. VTEP peer list
- C. VPNv4 prefixes
- D. router MAC address
- E. Layer 3 VNI

Correct Answer: ADE
