QUESTION 1

Which statement describes what happens during a file-disposition check for malware?

A. The managed device extracts the pieces of file from the data stream, calculates a hash on each piece, and forwards each piece to the cloud for checking. If all pieces are clean, the original file is forwarded to the destination.

B. The managed device extracts all pieces of a file before calculating a hash on the complete file. Each piece is forwarded to the destination with the final piece being released if the entire file is deemed clean.

C. The managed device extracts all pieces of a file before calculating a hash on the complete file. If the entire file is deemed clean, it is forwarded to the destination.

D. The managed device extracts the pieces of file from the data stream, calculates a hash on each piece, and forwards each piece to the cloud for checking. All pieces are also forwarded to the destination with the last piece being forwarded if it is deemed clean.

Correct Answer: B
