**QUESTION 1**

What two types of antennas have a high gain, narrow beam width, and are typically used for point-to-point bridging? (Choose two.)

- A. dipole antenna
- B. Yagi antenna
- C. patch antenna
- D. parabolic dish antenna
- E. omni-directional
- F. monopole antenna

Correct Answer: BD

QUESTION 2

Which three are logistical issues that need to be taken into consideration prior to performing a site survey? (Choose three.)

- A. What level of client density and throughput is expected for each WLAN cell?
- B. Will security clearances be required to perform the site survey?
- C. How much time will be required to survey each potential AP location?
- D. Will contractor badges and employee or union escorts be required while performing the site survey?
- E. Is access available to customer employees so initial interviews can be performed?
- F. Will any facility orientation be required prior to performing the site survey?

Correct Answer: BDF

QUESTION 3

What RF phenomenon results from a presence of metallic I-beams, conveyor belts, chain-link fences, and metallic shelves found in a warehousing environment?

- A. multipath
- B. free path loss
- C. absorption
- D. scattering

Correct Answer: A

QUESTION 4

Which three things do you need to consider prior to performing a wireless site survey? (Choose three.)

- A. The time required to acquire any additional infrastructure components.
- B. The time required to survey each potential AP location.
- C. The time required to assess application server locations at the customer facility.
- D. The type of wireless survey tools required to perform the site survey.
- E. The time required to assess customer WLAN density and throughput requirements.
- F. The time required to utilize the design mode in Cisco WCS to prepare a preliminary WLAN design to reduce on-site survey time.

Correct Answer: BDE

QUESTION 5

In post-deployment testing you have identified an area where there is a substantial rate- shift issue causing problems with the existing Cisco 7921 phones. How might you resolve this issue?

- A. Increase the AP power level to maintain higher throughput further away from the AP.
- B. Increase client RSSI, SNR, and retry values to maintain connectivity to the original AP for as long as possible.
- C. Change VoWLAN to 7925 phones.
- D. Reduce the power level of the AP so that roaming occurs before the client experiences the substantial rate shift.

Correct Answer: D
