**QUESTION 1**

Your network contains a System Center 2012 Configuration Manager environment.

In Default Client Agent Settings, you enable Hardware Inventory and Software Inventory.

You discover that a group of client computers fails to report software inventory data.

The client computers report hardware inventory data.

You confirm that Configuration Manager can deploy Applications to the group of client computers.

You need to identify what is causing the reporting issue.

Which log files should you review? (Choose all that Apply.)

- A. Filesystemfile.log
- B. Dataldr.log
- C. Mp_sinv.log
- D. Inventoryagent.log
- E. Hman.log

Correct Answer: ABD

A: FileSystemFile.log is a client log file that records the activity of the Windows Management Instrumentation (WMI) provider for software inventory and file collection.

B: Dataldr.log is a site server log file that records information about the processing of Management Information Format (MIF) files and hardware inventory in the Configuration Manager database.

D: Inventoryagent.log is a client log file that records activities of hardware inventory, software inventory, and heartbeat discovery actions on the client.

QUESTION 2

Your network contains a System Center 2012 Configuration Manager environment.

You create a collection named All Marketing Users.

You need to inventory the desktop settings of the All Marketing Users collection.

What should you do?

To answer, move the four appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Create a custom client user setting named Env.	
Create a custom client device setting named Env.	
Deploy the Env custom setting to the All Marketing Users collection.	
In the Env custom setting, select User Device Affinity .	
In the Envcustom setting, select Hardware Inventory .	
In the Envcustom setting, select Desktop (Win32_Desktop) .	
In the Envcustom setting, select Environment (Win32_Environment) .	

Correct Answer:

Create a custom client user setting named Env.	Create a custom client device setting named Env.
	In the Envcustom setting, select Hardware Inventory .
	In the Envcustom setting, select Desktop (Win32_Desktop) .
In the Env custom setting, select User Device Affinity .	Deploy the Env custom setting to the All Marketing Users collection.
In the Envcustom setting, select Environment (Win32_Environment) .	

* Win32_Environmentclass (Windows)

The Win32_Environment WMI class represents an environment or system environmentsetting on a Windows computer system. Querying this class returns environment variables found in:

HKEY_LOCAL_MACHINE\System\CurrentControlSet\Control\Sessionmanager\Environment

And HKEY_USERS\Environment

Since we need to inventory WMI information,that means we need Hardware Inventory and you can only do that with a Custom Client Device Setting:

Create Custom Client Device Settings

General

Hardware Inventory

Custom Device Settings

Specify the settings for devices. These settings override the default settings when they are assigned to a collection.

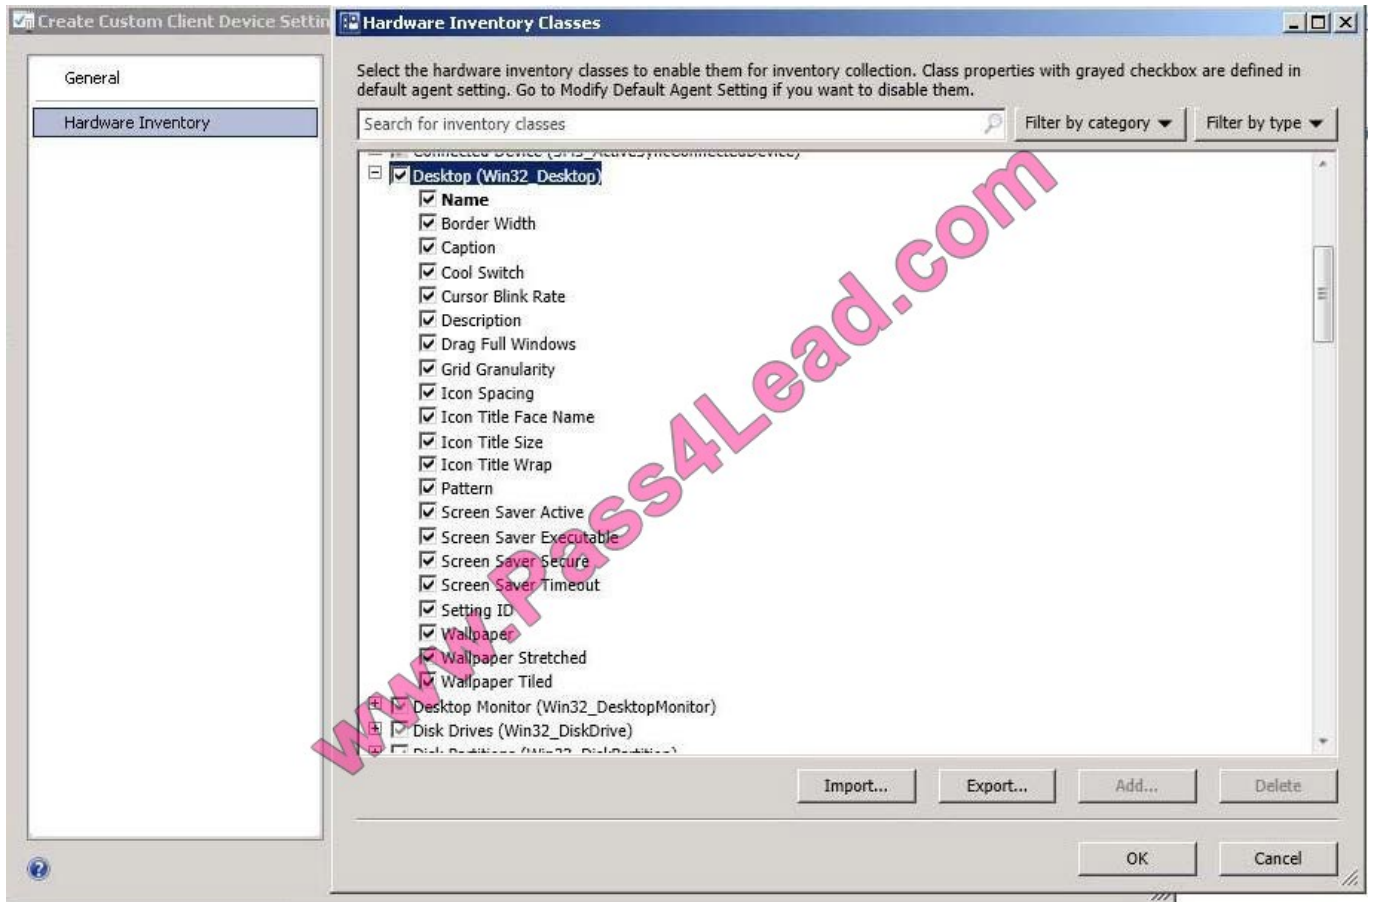

Name: Env

Description:

Select the custom settings to be enforced on client devices

- Background Intelligent Transfer
- Client Policy
- Compliance Settings
- Computer Agent
- Computer Restart
- Endpoint Protection
- Hardware Inventory
- Network Access Protection (NAP)
- Power Management
- Remote Tools
- Software Deployment
- Software Inventory
- Software Metering
- Software Updates
- State Messaging
- User and Device Affinity

OK Cancel

QUESTION 3

Your company uses System Center 2012 Configuration Manager to distribute operating system images.

You receive 300 new desktop computers. All of the client computers have the same hardware configuration.

When you attempt to deploy a Windows 7 image to one of the client computers, you receive an error message indicating that a storage device cannot be found during the pre- boot deployment phase.

You need to ensure that you can deploy Windows 7 to the new computers by using an image.

What should you do?

- A. Update the existing boot image to include the storage drivers.
- B. Clear the contents of the Drivers container and update the task sequence.
- C. Import the storage drivers to the Drivers container and update the task sequence.
- D. Create a new driver package and update the task sequence.

Correct Answer: A

Planning a Device Driver Strategy in Configuration Manager You can add Windows device drivers that have been imported into the driver catalog to boot images. Use the following guidelines when you add device drivers to a boot

image:

QUESTION 4

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

You deploy a Microsoft Office 2010 package to all client computers by using Configuration Manager.

Your company purchases Office 2013.

You need to ensure that all users can install Office 2013 from the Application Catalog.

What should you do?

- A. Deploy a new package for Office 2013.
- B. Deploy Office 2013 by using a Group Policy Object (GPO).
- C. Update the Office 2010source file and redeploy the package.
- D. Deploy a new Application for Office 2013.

Correct Answer: D

Microsoft System Center 2012 Configuration Manager continues to support packages and programs that were used in Configuration Manager 2007.

You can use Microsoft System Center Configuration Manager Package Conversion Manager to convert packages and programs into Configuration Manager applications.

QUESTION 5

Your network contains a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) environment.

The network contains 10 database servers that run Microsoft SQL Server 2014. You have a configuration baseline that is used to monitor the database servers.

You add new configuration items to the configuration baseline.

Two days later, you discover that only eight of the database servers report any information about the new configuration items.

You need to identify whether the new configuration items downloaded to the database servers.

Which log file should you review?

- A. Hman.log
- B. Sitestat.log
- C. Dcmagent.log
- D. Wsyncmgr.log

E. Ccm.log

F. Contenttransfermanager.log

G. Sdmagent.log

H. Rcmctrl.log

I. Ciagent.log

J. Ssmsexec.log

K. Locationservices.log

Correct Answer: I

Ciagent.log is a client log file that records details about the process of remediation and compliance for compliance settings, software updates, and application management.
