### QUESTION 1

Your network contains an Active Directory domain named adatum.com. The domain contains 10 domain controllers that run Windows Server 2012 R2.

You plan to create a new Active Directory-integrated zone named contoso.com.

You need to ensure that the new zone will be replicated to only four of the domain controllers.

Which of following action should you do first?

- A. Create an Active Directory site link.
- B. Create an application directory partition.
- C. Change the zone replication scope.
- D. Create an Active Directory connection object.

Correct Answer: B

---

### QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2. Server1 has the Network Policy Server server role installed.

You need to allow connections that use 802.1x. What should you create?

- A. A network policy that uses Microsoft Protected EAP (PEAP) authentication
- B. A network policy that uses EAP-MSCHAP v2 authentication
- C. A connection request policy that uses EAP-MSCHAP v2 authentication
- D. A connection request policy that uses MS-CHAP v2 authentication

Correct Answer: C

802.1X uses EAP, EAP-TLS, EAP-MS-CHAP v2, and PEAP authentication methods:

EAP (Extensible Authentication Protocol) uses an arbitrary authentication method, such as certificates, smart cards, or credentials. EAP-TLS (EAP-Transport Layer Security) is an EAP type that is used in certificate- based security

environments, and it provides the strongest authentication and key determination method.

EAP-MS-CHAP v2 (EAP-Microsoft Challenge Handshake Authentication Protocol version 2) is a mutual authentication method that supports password-based user or computer authentication.

PEAP (Protected EAP) is an authentication method that uses TLS to enhance the security of other EAP authentication protocols.

Connection request policies are sets of conditions and settings that allow network administrators to designate which Remote Authentication Dial-In User Service (RADIUS) servers perform the authentication and authorization of connection

requests that the server running Network Policy Server (NPS) receives from RADIUS clients. Connection request policies can be configured to designate which RADIUS servers are used for RADIUS accounting. With connection request

policies, you can use NPS as a RADIUS server or as a RADIUS proxy, based on factors such as the following:

The time of day and day of the week

The realm name in the connection request

The type of connection being requested

The IP address of the RADIUS client

---

### QUESTION 3

Your network contains one Active Directory domain named contoso.com. The forest functional level is Windows Server 2012. All servers run Windows Server 2012 R2. All client computers run Windows 8.1.

The domain contains 10 domain controllers and a read-only domain controller (RODC) named RODC01. All domain controllers and RODCs are hosted on a Hyper-V host that runs Windows Server 2012 R2.

You need to identify which domain controllers are authorized to be cloned by using virtual domain controller cloning.

Which cmdlet should you use?

- A. Get-ADGroupMember
- B. Get-ADDomainControllerPasswordReplicationPolicy
- C. Get-ADDomainControllerPasswordReplicationPolicyUsage
- D. Get-ADDomain
- E. Get-ADOptionalFeature
- F. Get-ADAccountAuthorizationGroup

Correct Answer: D

Explanation: One requirement for cloning a domain controller is an existing Windows Server 2012 DC that hosts the PDC emulator role. You can run the Get-ADDomain and retrieve which server has the PDC emulator role.

Example: Command Prompt: C:\PS> Get-ADDomain Output would include a line such as: PDCEmulator : Fabrikam-DC1.Fabrikam.com Reference: Step-by-Step: Domain Controller Cloning <http://blogs.technet.com/b/canitpro/archive/2013/06/12/step-by-step-domain-controller-cloning.aspx> Reference: Get-ADDomain <https://technet.microsoft.com/en-us/library/ee617224.aspx>

---

### QUESTION 4

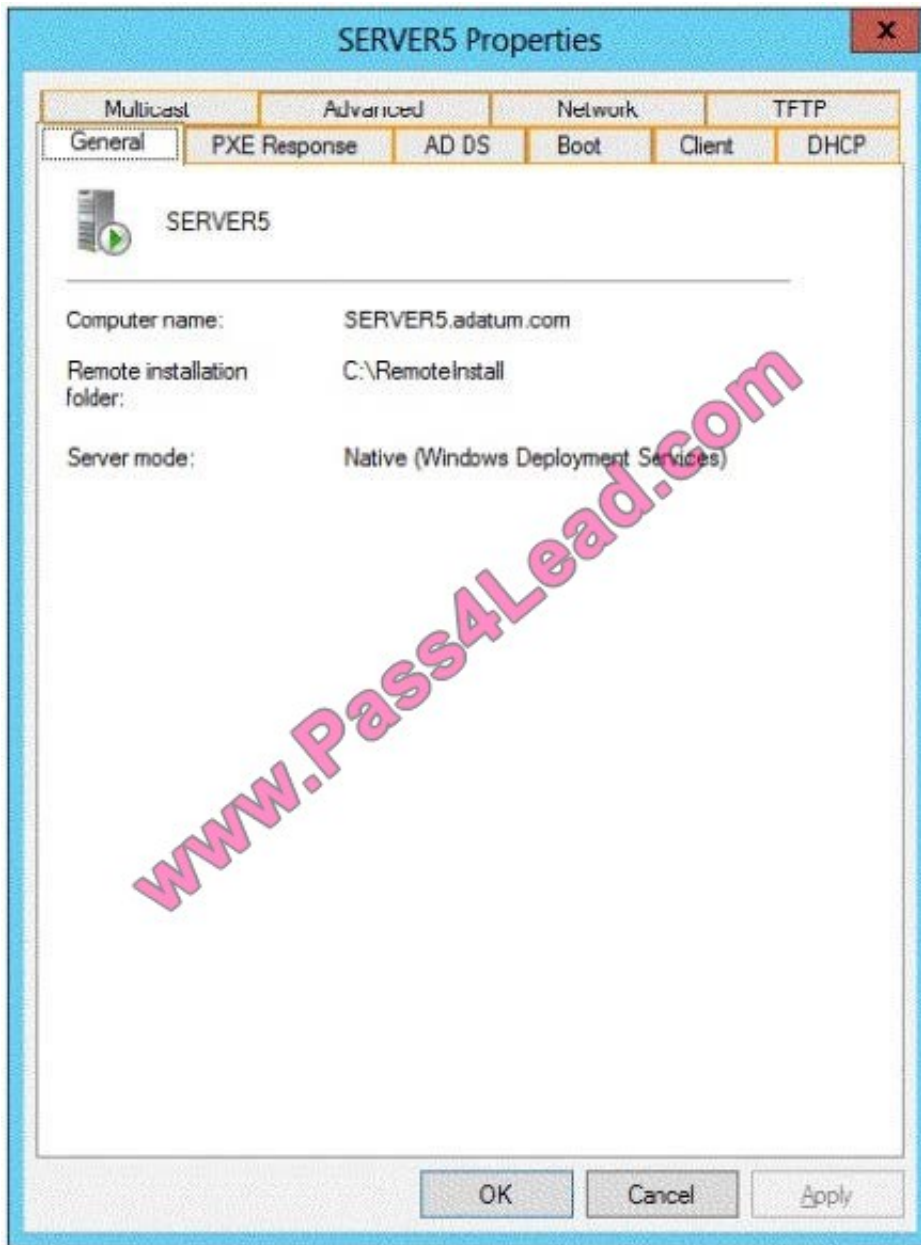

You have a server named Server5 that runs Windows Server 2012 R2. Servers has the Windows Deployment Services server role installed.

You need to ensure that when client computers connect to Server5 by using PXE, the computers use an unattended file.

What should you configure?

To answer, select the appropriate tab in the answer area.

Hot Area:

Correct Answer:

**QUESTION 5**

Your network contains one Active Directory domain. The domain contains a DirectAccess deployment.

You need to ensure that when the DirectAccess connection is active, the connection appears as "Contoso Internal Network -Authorized Users Only" on the DirectAccess clients.

What should you configure in the DirectAccess client Group Policy object (GPO)?

- A. Friendly Name
- B. Corporate Resources

C. User Interface

D. Prefer Local Names Allowed

Correct Answer: A
