**QUESTION 1**

Your network contains an Active Directory domain named contoso.com. The domain contains more than 100 Group Policy objects (GPOs). Currently, there are no enforced GPOs.

You have two GPOs linked to an organizational unit (OU) named OU1.

You need to change the precedence order of the GPOs.

What should you use?

- A. Dcgpofix
- B. Get-GPOReport
- C. Gpfixup
- D. Gpresult
- E. Gpedit. msc
- F. Import-GPO
- G. Restore-GPO
- H. Set-GPInheritance
- I. Set-GPLink
- J. Set-GPPermission
- K. Gpupdate
- L. Add-ADGroupMember

Correct Answer: I

The Set-GPLinkcmdlet sets the properties of a GPO link.

You can set the following properties:

Enabled. If the GPO link is enabled, the settings of the GPO are applied when Group Policy is processed for the site, domain or OU. Enforced. If the GPO link is enforced, it cannot be blocked at a lower-level (in the Group Policy processing

hierarchy) container.

Order. The order specifies the precedence that the settings of the GPO take over conflicting settings in other GPOs that are linked (and enabled) to the same site, domain, or OU.

QUESTION 2

Your network contains an Active Directory domain named contoso.com. The domain contains five servers. The servers are configured as shown in the following table.

Server name	Configuration
Server1	Domain controller
Server2	DHCP server
Server3	DNS server
Server4	Network Policy Server (NPS)
Server5	Windows Deployment Services (WDS)

All desktop computers in contoso.com run Windows 8 and are configured to use BitLocker Drive Encryption (BitLocker) on all local disk drives. You need to deploy the Network Unlock feature. The solution must minimize the number of features and server roles installed on the network. To which server should you deploy the feature?

- A. Server1
- B. Server2
- C. Server3
- D. Server4
- E. Server5

Correct Answer: E

The BitLocker Network Unlock feature will install the WDS role if it is not already installed. If you want to install it separately before you install BitLocker Network Unlock you can use Server Manager or Windows PowerShell. To install the role using Server Manager, select the Windows Deployment Services role in Server Manager.

QUESTION 3

You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the File Server Resource Manager role service installed. Server1 has a folder named Folder1 that is used by the sales department.

You need to ensure that an email notification is sent to the sales manager when a File Screening Audit report is generated.

What should you configure on Server1?

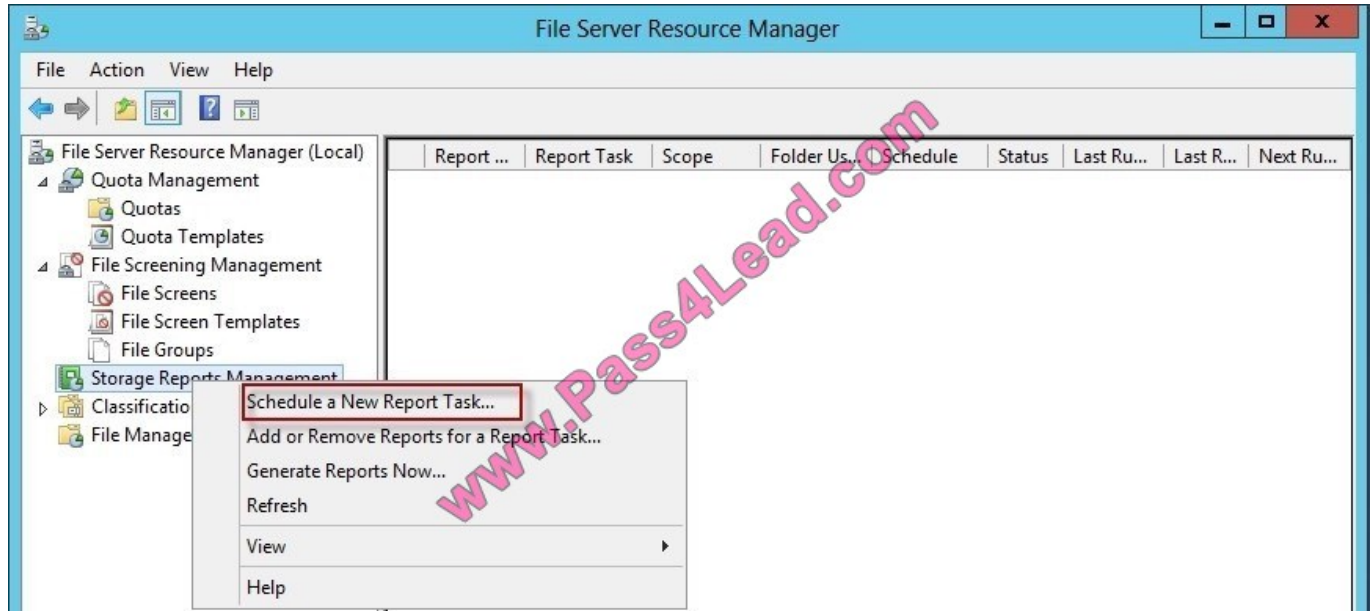

- A. a file group
- B. a file screen
- C. a file screen exception

D. a storage report task

Correct Answer: D

From the Storage Reports Management node, you can generate reports that will help you understand file use on the storage server. You can use the storage reports to monitor disk usage patterns (by file type or user), identify duplicate files and dormant files, track quota usage, and audit file screening.

Before you run a File Screen Audit report, in the File Server Resource Manager Options dialog box, on the File Screen Audit tab, verify that the Record file screening activity in the auditing database check box is selected. QUESTION 4

You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the Windows Server Update Services server role installed.

Server1 stores update files locally in C:\Updates.

You need to change the location in which the update files are stored to D:\Updates.

What should you do?

- A. From the Update Services console, run the Windows Server Update Services Configuration Wizard.
- B. From a command prompt, run wsusutil.exe and specify the movecontent parameter.
- C. From the Update Services console, configure the Update Files and Languages option.
- D. From a command prompt, run wsusutil.exe and specify the export parameter.

Correct Answer: B

You might need to change the location where WSUS stores updates locally. This might be required if the disk becomes full and there is no longer any room for new updates. You might also have to do this if the disk where updates are stored

fails and the replacement disk uses a new drive letter.

You accomplish this move with the movecontent command of WSUSutil.exe, a command-line tool that is copied to the file system of the WSUS server during WSUS Setup. By default, Setup copies WSUSutil.exe to the following location:

WSUSInstallationDrive:\Program Files\Microsoft Windows Server Update Services\Tools\

QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that has the Network Policy Server server role installed.

The domain contains a server named Server2 that is configured for RADIUS accounting.

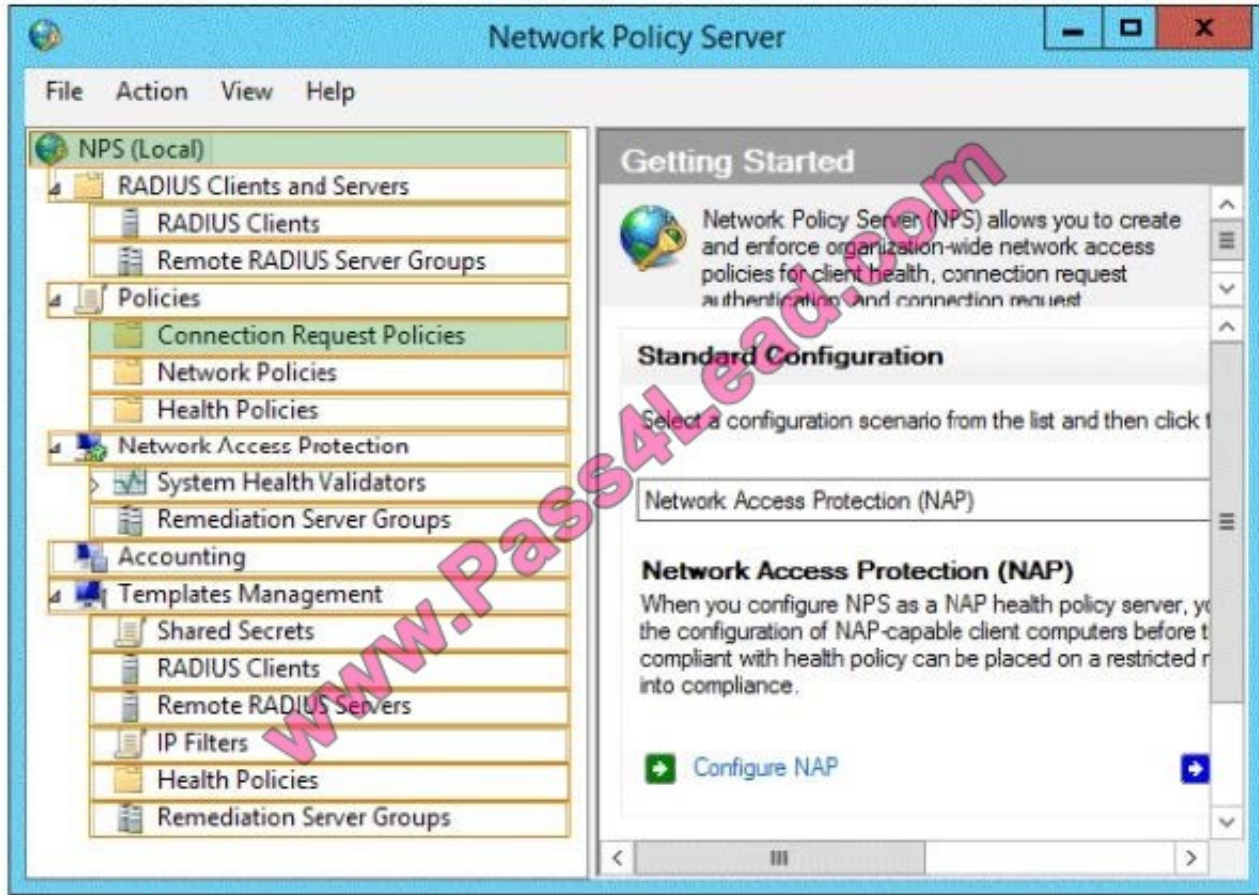

Server1 is configured as a VPN server and is configured to forward authentication requests to Server2.

You need to ensure that only Server2 contains event information about authentication requests from connections to Server1.

Which two nodes should you configure from the Network Policy Server console?

To answer, select the appropriate two nodes in the answer area.
