### QUESTION 1

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that have Microsoft Deployment Toolkit (MDT) 2012 installed. Server1 is used for testing and Server2 is

used to deploy images to production computers.

On Server1, you have several deployments of Windows 7 and Windows 8.

You need to replicate only the content related to the Windows 8 deployments from Server1 to Server2.

What three actions should you perform from the Deployment Workbench?

To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
On Server1, create a linked deployment share.	
On Server2, create a linked deployment share.	
On Server1, create a selection profile.	
On Server2, run Update Deployment Share.	
On Server2, create a selection profile.	
On Server2, run Replicate Content.	
On Server1, run Replicate Content.	
On Server1, run Update Deployment Share.	

Correct Answer:

Actions	Answer Area
	On Server2, create a selection profile.
On Server2, create a linked deployment share.	On Server1, create a linked deployment share.
On Server1, create a selection profile.	On Server1, run Replicate Content.
On Server2, run Update Deployment Share.	
On Server2, run Replicate Content.	
On Server1, run Update Deployment Share.	

Note:

\* When you replicate a deployment share, you can replicate everything or you can choose which folders in the deployment share to replicate. You choose folders to replicate by creating selection profiles. A selection profile simply selects folders across applications, operating systems, out-of-box drivers, packages, and task sequences. You create a selection profile in advance, and then you choose that selection profile when you set up replication.

## QUESTION 2

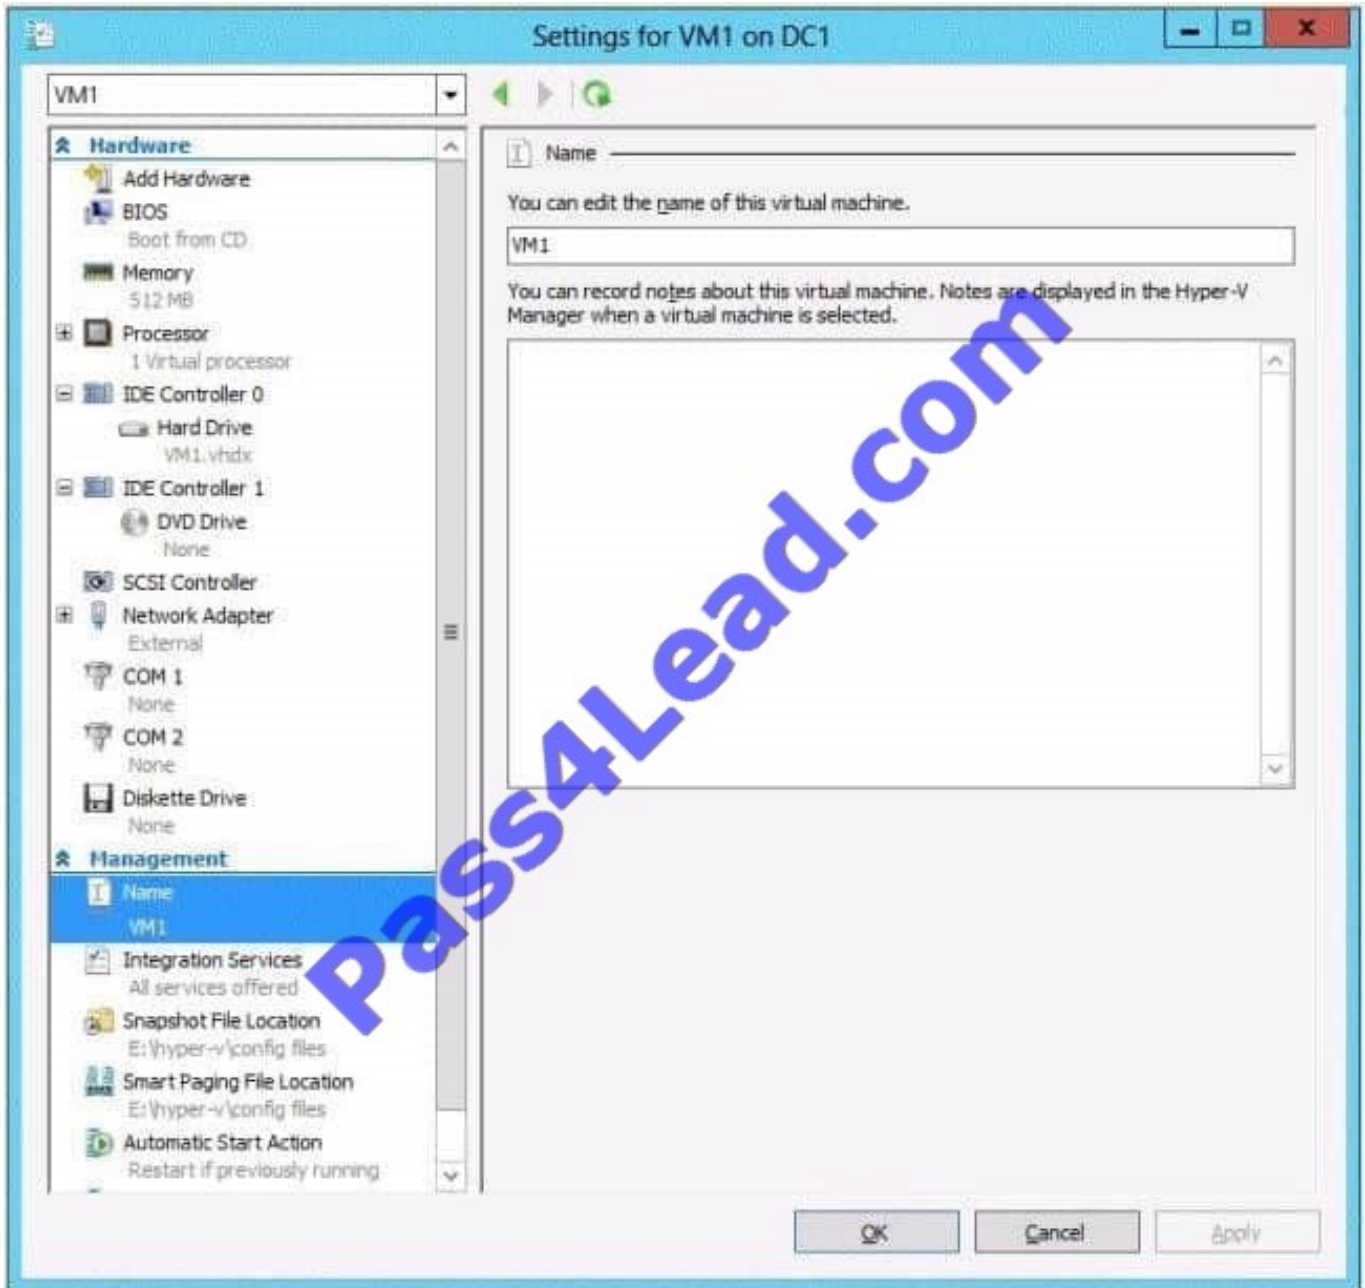

You need to prepare a virtual machine template that meets the VDI requirements. What should you do?

- A. Run `dism.exe` and specify the `/image` parameter.
- B. Run `dism.exe` and specify the `/export-image` parameter.
- C. Run `sysprep.exe` and specify the `/audit` parameter.
- D. Run `sysprep.exe` and specify the `/generalize` parameter.

Correct Answer: D

## QUESTION 3

Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Windows Deployment Services server role installed. You have a virtual machine named VM1. VM1 is configured as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that you can capture an image of VM1 by using Windows Deployment Services (WDS). What should you do?

- A. Add a legacy network adapter to VM1 and a capture image to Server1.
- B. Add an install image and a capture image to Server1.
- C. Add a legacy network adapter to VM1 and a discovery image to Server1.
- D. Add a discovery image and a capture image to Server1.

Correct Answer: A

#### QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that has the Windows Deployment Services server role installed. Server1 hosts a single install image of Windows 8 (x64)

and 200 driver groups. Each driver group has a different set of filters configured.

You are preparing to deploy windows 8 to a new hardware model.

You need to recommend a solution to identify which drivers from the existing driver groups will be deployed to the new hardware model.

What should you do first?

- A. Create a prestaged device.
- B. Create a capture image.
- C. Install Microsoft Deployment Toolkit (MDT) 2012.
- D. Install the Microsoft Assessment and Planning (MAP) Toolkit.

Correct Answer: A

---

#### QUESTION 5

Your network contains an Active Directory domain named contoso.com. The domain has Microsoft System Center 2012 Configuration Manager deployed.

You use Configuration Manager to deploy Windows updates to client computers.

Your company has several line-of-business applications deployed. The application developer uses Windows Installer patches (.msp files) to provide the company with application updates. You need to recommend a solution to integrate the

deployment of the application updates into the current update infrastructure.

What should you include in the recommendation?

- A. Windows Assessment and Deployment Kit (Windows ADK)
- B. Microsoft Deployment Toolkit (MDT)
- C. Microsoft Security Compliance Manager
- D. Microsoft System Center Updates Publisher 2011

Correct Answer: D
