QUESTION 1

Your network contains a Virtual Desktop Infrastructure (VDI). All users access applications by using their virtual desktop. All virtual desktops run Windows 8. You have a test environment that contains four computers. The computers are configured as shown in the following table.

Computer name	Configuration
Server1	Microsoft Application Virtualization (App-V) management server
Client1	Physical computer that runs Windows 8
Server2	Microsoft Application Virtualization (App-V) publishing server
Client2	Virtual machine that runs Windows 8

You plan to sequence 15 applications that will be deployed to the virtual desktops. You need to identify which computers must be used to run the App-V Sequencer. Which computer should you identify? More than one answer choice may achieve the goal. Select the BEST answer.

A. Server1

B. Client1

C. Server2

D. Client2

Correct Answer: D

QUESTION 2

Your network contains multiple servers that run Windows Server 2012. The network contains a Windows Server Update Services (WSUS) infrastructure.

On a server named Server1, you create and deploy images by using Microsoft Deployment Toolkit (MDT) 2012.

You need to recommend a solution to ensure that the available updates are applied during the deployment of the image.

What should you do?

A. From the WSUS Administration console, configure the personalization settings, and then create a computer group.

B. From Server1, edit the task sequence, and then modify the Customsettings.ini file.

C. From the WSUS Administration console, configure the personalization settings, and then configure the

classifications.

D. From Server1, edit the task sequence, and then modify the Bootstrap.ini file.

Correct Answer: B

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains 500 client computers that run Windows 8.

You plan to deploy two applications named App1 and App2 to the client computers. App2 is updated by the application manufacturer every month.

The solution must meet the following requirements:

The executable files of App1 must NOT be stored on the client computers. Users who run App2 must run the latest version of App2 only.

What should you recommend using to deploy the applications?

A. RemoteApp programs

B. Microsoft Enterprise Desktop Virtualization (MED-V)

C. Microsoft Application Virtualization (App-V) in standalone mode

D. A Group Policy software distribution package assigned to the computer accounts

Correct Answer: A

Note:

*

 RemoteApp enables you to make programs that are accessed remotely through Remote Desktop Services appear as if they are running on the end user\\'s local computer. These programs are referred to as RemoteApp programs. Instead of being presented to the user in the desktop of the Remote Desktop Session Host (RD Session Host) server, the RemoteApp program is integrated with the client\\'s desktop. The RemoteApp program runs in its own resizable window, can be dragged between multiple monitors, and has its own entry in the taskbar. If a user is running more than one RemoteApp program on the same RD Session Host server, the RemoteApp program will share the same Remote Desktop Services session.

Incorrect: Not B:

*

 The App-V clients may also be used in a "stand-alone" mode without either of the server infrastructures. In this case, the sequenced packages are delivered using an external technique, such as an Electronic Software Delivery system or manual deployment.

*

Microsoft Application Virtualization (MS App-V) platform allows applications to be deployed ("streamed") in real-time to any client from a virtual application server. It removes the need for traditional local installation of the applications, although a standalone deployment method is also supported. With a streaming-based implementation, the App-V client needs to be installed on the client machines and application data that is stored on the virtual application server is installed (streamed) to the client cache on demand when it is first used, or pre-installed in a local cache.

QUESTION 4

You need to update App4 in the standard desktop image. The solution must meet the technical requirements and the application requirements.

Which four actions should you perform? To answer, move the four appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Run the App4A MSI package.	
Unmount the image and commit the changes.	
Add the App4A MSI package to the image.	
Mount the image.	
Export the image.	
Deploy the image.	
Capture the image.	
Generalize the installation.	

Correct Answer:

Actions	Answer Area
	Deploy the image.
Unmount the image and commit the changes.	Run the App4A MSI package.
Add the App4A MSI package to the image.	Generalize the installation.
Mount the image.	Capture the image.
Export the image.	

QUESTION 5

You need to configure security for the HR users to meet the application requirements A. Security Options

B. Restricted Groups

C. Public Key Policies

D. Application Control Policies

Correct Answer: D
