Following Questions and Answers are all new published by Microsoft Official Exam Center

QUESTION 1

You are developing a SQL Server Analysis Services (SSAS) cube for the sales department at your company.

The sales department requires the following set of metrics:

Unique count of customers

Unique count of products sold

Sum of sales

You need to ensure that the cube meets the requirements while optimizing query response time.

What should you do? (Each answer presents a complete solution. Choose all that apply.)

A. Place the measures in a single measure group.

B. Place the distinct count measures in separate measure groups.

C. Use the additive measure group functions.

D. Use the semiadditive measure group functions.

E. Use the Count and Sum measure aggregation functions.

F. Use the Distinct Count and Sum measure aggregation functions.

Correct Answer: BF

QUESTION 2

You need to ensure that all reports meet the reporting requirements.

What is the best way to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

A. Create a report part. Publish the report part to a server that has SSRS installed. Add the report part to each new report that is created.

B. Create a report part. Publish the report part to a SharePoint site. Add the report part to each new report that is created.

C. Create a report. Copy the report to source code control. Create each new report by using the report template in source code control.

D. Create a report. Copy the report to the PrivateAssemblies\ProjectItems\ReportProject folder in the Visual Studio directory. Create each new report by using the locally stored report

Correct Answer: D

QUESTION 3

You have two servers named Server1 and Server2. Both servers have SQL Server 2012 installed. Both servers have a SQL Server Integration Services (SSIS) catalog.

You are preparing a disaster recovery plan for a business intelligence (BI) solution.

You need to ensure that the SSIS catalog from Server1 can be restored to Server2.

Which two actions should you perform on Server1? Each correct answer presents part of the solution.

A. Back up the master database.

B. Run sp.configure \\'clr enabled\\', 0.

C. Back up the master key of the SSISDB database.

D. Back up the master key of the master database.

E. Back up the SSISDB database.

F. Run sp_configure \\'clr enabled\\', 1.

Correct Answer: CE

QUESTION 4

A production SQL Server Analysis Services (SSAS) cube is processed daily. The users query facts by using a hierarchy named Geography from a dimension named Geography. The DimGeography table in the data source view is used as the source of the Geography dimension. The table has the following structure.

```
CREATE TABLE [dbo].[DimGeography](
    [DimensionKey] [int] IDENTITY(1,1) NOT NULL,
    [CityKey] [int] NOT NULL,
    [CityName] [varchar](50) NOT NULL,
    [StateProvinceKey] [int] NOT NULL,
    [StateProvinceName] [varchar](50) NOT NULL,
    [CountryKey] [int] NOT NULL,
    [CountryName] [varchar](50) NOT NULL
) ON [PRIMARY]
```

The Geography dimension has three attribute hierarchies:

City

State-Province

Country

The attributes have the following relationships defined: City > State-Province > Country. Each attribute has a key and a

name sourced from the related key and name columns in the DimGeography table.

During processing, you receive the following error message: "Errors in the OLAP storage engine: A duplicate attribute key has been found when processing: Table: \\'dbo_DimGeography, Column:

StateProvinceKey\\', Value: \\'23\\'. The attribute is \\'State-Province\\'."

You verify that the data is accurate.

You need to ensure that the dimension processes successfully.

What should you do?

A. Remove the duplicate data from the DimGeography table.

B. Delete the Geography hierarchy.

C. Relate the State-Province and Country attributes directly to the City attribute.

D. Remove the State-Province attribute.

Correct Answer: C

QUESTION 5

You are developing a SQL Server Analysis Services (SSAS) tabular project based on a Microsoft Azure SQL Database database. The ProcessingOption property for the project is set to Do Not Process.

Several calculated columns have been added to a table. The project has been deployed to the production server.

You need to ensure that newly added data is processed on the production server.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Right-click the table and then select **Process Table**.
Open the project in SQL Server Data Tools (SSDT).
On the **Model** menu, select **Process** and then select **Process Table**.
In the model designer, select the table.
In Object Explorer, connect to the SSAS instance, expand the database, and then expand the Tables folder.
Open SQL Server Management Studio (SSMS).

Correct Answer:

Open the project in SQL Server Data Tools (SSDT).	Open SQL Server Management Studio (SSMS).
On the **Model** menu, select **Process** and then select **Process Table**.	In Object Explorer, connect to the SSAS instance, expand the database, and then expand the Tables folder.
In the model designer, select the table.	Right-click the table and then select **Process Table**.
