Following Questions and Answers are all new published by Microsoft Official Exam Center

**QUESTION 1**

You have a SQL Server Analysis Services (SSAS) database named DB1 on a server named Server1.

You need to deploy DB1 from Server1 to four other servers. If the destination server already contains a copy of DB1, the database must be updated only. If the destination server does not contain a copy of DB1, the database must be copied to the destination server.

What is the best deployment option to use? More than one answer choice may achieve the goal. Select the BEST answer.

A. Analysis Services Deployment Wizard

B. Analysis Management Objects (AMO) automation

C. Backup and Restore

D. Synchronize Database Wizard

Correct Answer: D

Explanation: In the Synchronize Database Wizard dialog box, type the name of the source server and source database in the appropriate fields. Synchronization will occur for source and destination databases that have the same name. If the destination server already has a database that shares the same name as the source database, the destination database will be updated with the metadata and data of the source. If the database does not exist, it will be created on the destination server. Click Next.

**QUESTION 2**

You are developing a BI Semantic Model (BISM) that retrieves data from several sources including a Microsoft Azure SQL Database database and an OData data feed. The model will be deployed to a server with significantly more memory

than the total size of the source data.

You have the data feed URL, which you will use when developing the model in SQL Server Data Tools (SSDT).

The model must meet the following requirements:
Maximize performance

Data latency of up to one month is acceptable

You need to choose a project type and a data access mode to meet the requirements.

What should you do?

A. Select the multidimensional project type and use the ROLAP storage mode.

B. Select the tabular project type and use the In-Memory query mode.

C. Select the tabular project type and use the DirectQuery query mode.

D. Select the multidimensional project type and use the MOLAP storage mode.

Correct Answer: B

**QUESTION 3**

You are managing a SQL Server Reporting Services (SSRS) instance in native mode. A system role named Developer Support is present on the server.

Members of the Developer Support role cannot modify the report execution timeout period.

You need to enable members of the Developer Support role to modify the report execution timeout period.

Which task should you add to the Developer Support role?

A. Manage report server properties

B. Manage shared schedules

C. Execute report definitions

D. Manage jobs

Correct Answer: A

**QUESTION 4**

You manage a SQL Server Reporting Services (SSRS) instance running in native mode.

You are troubleshooting a performance problem and need to know which reports are frequently executed. You discover that the report server execution logs are empty, despite significant report ctivity.

You need to ensure that the server is configured for report execution logging.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Enable the **Enable report execution logging** option.

In SQL Server Management Studio (SSMS), connect to the server that runs Report Server.

In the Application Management Group, click **Manage Service Applications**.

Open Reporting Services Configuration Manager.

Open the Server Properties window.

Open SharePoint Central Administration.

Correct Answer:

| | In SQL Server Management Studio (SSMS), connect to the server that runs Report Server. |
| | Open the Server Properties window. |
| In the Application Management Group, click **Manage Service Applications**. | Enable the **Enable report execution logging** option. |
| Open Reporting Services Configuration Manager. | |
| | |
| Open SharePoint Central Administration. | |

Note: This server is running in NATIVE mode (not Sharepoint mode)

To enable execution logging (in Native mode):

1. Start SQL Server Management Studio with administrative privileges. For example right-click the Management Studio icon and click

**QUESTION 5**

You need to develop the multidimensional project to meet the requirements of the Excel users. What should you do?

A. Create a separate cube for the executive team so that it contains only the data they want to see.

B. Create a perspective for the executive team.

C. Create security roles to restrict access to the executive team.

D. Create a view for the executive team.

Correct Answer: B
