**QUESTION 1**

You need to ensure that the website scales.

What should you do?

- A. Deploy Traffic Manager and configure it to route user traffic to specified endpoints to other Azure datacenters.
- B. Enter multiple DNS entries in each virtual network to route requests to other Azure datacenters.
- C. Set up a new Azure datacenter to Azure datacenter VPN to enable the solution to communicate across regions.
- D. Use a virtual network to route network traffic in a single Azure datacenter.

Correct Answer: C

Scenario: The customer-facing website must automatically scale and replicate to locations around the world.

Azure ExpressRoute enables you to create private connections between Azure datacenters and infrastructure that's on your premises or in a colocation environment. ExpressRoute connections do not go over the public Internet, and offer

more reliability, faster speeds, lower latencies and higher security than typical connections over the Internet. In some cases, using ExpressRoute connections to transfer data between on-premises and Azure can also yield significant cost benefits.

QUESTION 2

You manage several Azure virtual machines (VMs). You create a custom image to be used by employees on the development team.

You need to ensure that the custom image is available when you deploy new servers. Which Azure Power Shell cmdlet should you use?

- A. Update-AzureVMImage
- B. Add-AzureVhd
- C. Add-AzureVMImage
- D. Update-AzureDisk
- E. Add-AzureDataDis

Correct Answer: C

The Add-AzureVMImage cmdlet adds a new operating system image or a new virtual machine image to the image repository. The image is a generalized operating system image, using either Sysprep for Windows or, for Linux, using the appropriate tool for the distribution.

QUESTION 3

You have an on-premises Active Directory Domain Services domain. You are considering moving your infrastructure to Azure Active Directory.

You need to describe the features that each directory service provides.

For each feature, what should you implement? To answer, select the appropriate option from each list in the answer area.

Hot Area:

Answer Area

Feature	Active Directory Domain Services	Azure Active Directory								
Query the directory	<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">▼</div> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td style="padding: 2px;">LDAP</td><td style="width: 50px;"></td></tr> <tr><td style="padding: 2px;">Graph API</td><td></td></tr> </table> </div>	LDAP		Graph API		<div style="border: 1px solid gray; padding: 2px;"> <div style="background-color: #f0f0f0; padding: 2px;">▼</div> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td style="padding: 2px;">LDAP</td><td style="width: 50px;"></td></tr> <tr><td style="padding: 2px;">Graph API</td><td></td></tr> </table> </div>	LDAP		Graph API

QUESTION 4

You are designing the deployment of Azure Site Recovery with Hyper-V Replica. The environment does not have System Center Virtual Machine Manager (VMM) deployed.

You need to instruct an implementation team to prepare the Azure environment for deployment.

Which three actions should you recommend to be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Create a Hyper-V failover cluster.

Define the source and target replicas.

Create an Azure Recovery Services vault.

Install System Center VMM.

Enable replication for the virtual machines (VMs).

Answer Area

The answer area contains two sets of arrows: a left-pointing arrow above a right-pointing arrow on the left side, and an up-pointing arrow above a down-pointing arrow on the right side. A large pink watermark 'www.Pass4Lead.com' is overlaid diagonally across the area.

Correct Answer:

Actions

Create a Hyper-V failover cluster.

Install System Center VMM.

Answer Area

The correct answer area shows three actions in a vertical stack: 'Create an Azure Recovery Services vault.', 'Enable replication for the virtual machines (VMs).', and 'Define the source and target replicas.' To the left of the stack are a left-pointing arrow above a right-pointing arrow. To the right are an up-pointing arrow above a down-pointing arrow. A large pink watermark 'www.Pass4Lead.com' is overlaid diagonally across the area.

QUESTION 5

You are designing the deployment of virtual machines (VMs) and web services that run in Azure. You need to specify the desired state of a node and ensure that the node remains at that state. What should you use?

- A. Microsoft Azure Pack
- B. Service Management Automation
- C. System Center 2016 Orchestrator
- D. Azure Automation

Correct Answer: D
