QUESTION 1

You develop Web-based client applications. Your team is developing a Web site for Coho Winery to handle order processing. Both sales staff and customers will use the Web site to place orders. You must develop the data component that

will be called by the Web-based application such that the Web based application meets the following criteria:

The application uses separate Web pages for sales staff and customers to place orders.

Sales staff can apply a discount to the order.

Customers cannot apply any discount to the order.

Future changes to the pricing structure can be implemented by using the minimum amount of code. You need to ensure that the data component that you develop meets the outlined criteria.

What should you do?

A. Create a Coho Winery class. The Coho Winery class must include a method named Place Order. The Place Order method must include a Boolean parameter named Sales Person.If Sales Person is True, a discount must be applied to the order.

B. Create an Order class. The Order class must include two methods named Customer Place Order and SalesPersonPlaceOrder.The CustomerPlaceOrder method must accept all the parameters that are necessary for a customer to place an order.The SalesPersonPlaceOrder method must accept all the parameters that are necessary for a sales person to place an order, including the Discount parameter.

C. Create a Customer class and a SalesPerson class.Each class must include a method named Place Order. Each method must include all the parameters that are necessary for placing an order.The Place Order method in the Sales Person class must include a parameter for discount.

D. Create an Order class. The Order class must include an overloaded method named Place Order. One version of the Place Order method must accept a parameter for discount. The parameter for discount must be used to calculate a discount on the order.

Correct Answer: D

QUESTION 2

You are creating a class that uses unmanaged resources. This class maintains references to managed resources on other objects. You need to ensure that users of this class can explicitly release resources when the class instance ceases to be needed. Which three actions should you perform? (Each correct answer presents part of the solution. Choose three.)

A. Define the class such that it inherits from the WeakReference class.

B. Define the class such that it implements the IDisposable interface.

C. Create a class destructor that calls methods on other objects to release the managed resources.

D. Create a class destructor that releases the unmanaged resources.

E. Create a Dispose method that calls System.GC.Collect to force garbage collection.

F. Create a Dispose method that releases unmanaged resources and calls methods on other objects to release the managed resources.

Correct Answer: BDF

QUESTION 3

You are transferring records from one database to another. You need to decide whether you can use the SqlBulkCopy class to transfer the records. What should you do?

A. Ensure that the source database is Microsoft SQL Server.

B. Ensure that the destination database is Microsoft SQL Server.

C. Ensure that the column names in the source table match the column names in the destination table.

D. Ensure that the bulk copy program (bcp) utility is installed on the destination server.

Correct Answer: B

QUESTION 4

You are changing the security settings of a file named MyDat

A. xml. You need to preserve the existing inherited access rules. You also need to prevent the access rules from inheriting changes in the future. Which code segment should you use?

B. FileSecurity security = new FileSecurity("mydata.xml", AccessControlSections.All);security.SetAccessRuleProtection(true, true);File.SetAccessControl("mydata.xml", security);

C. FileSecurity security = new FileSecurity();security.SetAccessRuleProtection(true, true);File.SetAccessControl("mydata.xml", security);

D. FileSecurity security = File.GetAccessControl("mydata.xml");security.SetAccessRuleProtection(true, true);

E. FileSecurity security = File.GetAccessControl("mydata.xml");security.SetAuditRuleProtection(true, true);File.SetAccessControl("mydata.xml", security);

Correct Answer: A

QUESTION 5

You have an SQL query that takes one minute to execute. You use the following code segment to execute the SQL query asynchronously.

IAsyncResult ar = cmd.BeginExecuteReader();

You need to execute a method named DoWork() that takes one second to run while the SQL query is executing. DoWork() must run as many times as possible while the SQL query is executing. Which code segment should you use?

A. while (ar.AsyncWaitHandle == null) { DoWork();}dr = cmd.EndExecuteReader(ar);

B. while (!ar.IsCompleted) { DoWork();}dr = cmd.EndExecuteReader(ar);

C. while (Thread.CurrentThread.ThreadState == ThreadState.Running) { DoWork();}dr = cmd. EndExecuteReader(ar);

D. while (!ar.AsyncWaitHandle.WaitOne()) { DoWork();}dr = cmd.EndExecuteReader(ar);

Correct Answer: B
