QUESTION 1

Your network contains a server that runs Windows Server 2008 R2. On the server, you run ipconfig as shown in the exhibit. (Click the Exhibit button.)

```
Administrator: Command Prompt
C:\Users\Administrator>ipconfig

Windows IP Configuration

Ethernet adapter Local Area Connection:

    Connection-specific DNS Suffix  . : 
    Link-local IPv6 Address . . . . . : fe80::541:8b41:a214:99e0%11
    IPv4 Address. . . . .             : 172.23.1.100
    Subnet Mask . . . . .            : 255.255.255.0
    Default Gateway . . . . .        : 172.23.1.1

Tunnel adapter isatap.{30FA11DD-DD7E-4390-B3AC-4534E462F268}:

    Media State . . . . .            : Media disconnected
    Connection-specific DNS Suffix  . : 

Tunnel adapter Teredo Tunneling Pseudo-Interface:

    Media State . . . . .            : Media disconnected
    Connection-specific DNS Suffix  . : 

C:\Users\Administrator>
```

You need to ensure that the server can access remote TCP/IPv6 hosts.

What should you do?

- A. Disable Internet Protocol Version 4 (TCP/IPv4).
- B. Add a default gateway.
- C. Modify the subnet mask.
- D. Configure an IPv6 address.

Correct Answer: D

QUESTION 2

Your network contains a DNS server that runs Windows Server 2008 R2. You open the Forwarders settings of the DNS server and discover that the option to add forwarders is disabled. You need to add forwarders to the DNS server. What should you do first?

- A. Enable BIND secondaries
- B. Delete the "." (root) zone.
- C. Create a GlobalNames zone.
- D. Delete all conditional forwarders.

Correct Answer: B

QUESTION 3

Your company has a domain controller named Server1 that runs Windows Server 2008 R2 and the DNS server role. A server named Server2 runs Windows Server 2003 and Microsoft Exchange Server 2007.

The company wants to deploy a new Exchange server named Server3 to receive all inbound e-mail traffic. You need to configure DNS to direct incoming e-mail traffic to the Exchange servers. You also need to ensure that higher priority is given to Server3.

What should you do?

- A. Set the priority value of the Server2 Mail Exchanger (MX) record to 20. Create a new Mail Exchanger (MX) record for Server3. Set the priority value to 5.
- B. Set the priority value of the Server2 Mail Exchanger (MX) record to 5. Create a new Mail Exchanger (MX) record for Server3. Set the priority value to 20.
- C. Create a new Service Location (SRV) record in the domain for Server3. Set the port number value to 25. Configure the priority setting to 20.
- D. Create a new Service Location (SRV) record in the domain for Server3. Set the port number value to 110. Configure the priority setting to 5.

Correct Answer: A

QUESTION 4

Your network contains a server named Server1 that runs Windows Server 2008 R2. You discover that the server unexpectedly shut down several times during the past week.

You need to identify what caused the shutdowns and which software was recently installed.

What should you click from Action Center?

- A. Maintenance, and then View reliability history
- B. Troubleshooting, and then Programs
- C. Troubleshooting, and then System and Security
- D. Troubleshooting, and then View history

Correct Answer: A

QUESTION 5

Your network contains a Windows Server Update Services (WSUS) server. All computers on the network are configured to download and install updates once a week.

You need to deploy a critical update to a WSUS client as soon as possible. Which command should you run?

- A. `dism.exe /online /check-apppatch`
- B. `gpupdate.exe /force`
- C. `secedit.exe /refreshpolicy`
- D. `wuauclt.exe /detectnow`

Correct Answer: D

Manipulate Automatic Updates Behavior Using Command-line Options There are two documented commandline options used for manipulating Automatic Updates behavior. These options are meant to be run from a command prompt. They are helpful for testing and troubleshooting client computers. For comprehensive troubleshooting information for problems with both the WSUS server and client computers, see "Microsoft Windows Server Update Services Operations Guide."

Detectnow Option Because waiting for detection to start can be a time-consuming process, an option has been added to allow you to initiate detection right away. On one of the computers with the new Automatic Update client installed, run the following command at the command prompt: `wuauclt.exe /detectnow`
