QUESTION 1

Your company has offices in New York and London.

All client computers run Windows 10.

You have a deployment of System Center Configuration Manager (Current Branch) that you use to manage the computers.

The company has the applications shown in the following table.

Application name	Description
App1	Installed by using an Windows Installer (MSI) package
App2	Installed by using an Windows Installer (MSI) package and is dependent on App1
App3	Installed by using an executable file named Setup.exe

You need to deploy the applications to meet the following requirements:

Deploy App2 to all the computers in the New York office.

Deploy App3 to all the computers in the London office.

Minimize administrative effort.

What should you create in Configuration Manager for each deployment? To answer, drag the appropriate options to the correct applications. Each option may be used once, more than once, or not at all. You may need to drag the split bar

between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

The screenshot shows the Configuration Manager console interface. On the left, the 'Options' pane contains four items: 'an application', 'a deployment package', 'a package', and 'a software update group'. On the right, the 'Answer Area' shows two application entries: 'App2:' and 'App3:'. Each entry has a dashed box containing the word 'Option'. A watermark 'www.Pass4Lead.com' is visible across the interface.

Correct Answer:

Options

a deployment package

a software update group

Answer Area

App2: an application

App3: a package

QUESTION 2

You have a deployment of System Center Configuration Manager (Current Branch).

You use the deployment to manage client computers that run Windows 7.

You need to deploy a Microsoft Application Virtualization (App-V) package to the computers by using Configuration Manager.

What should you do first?

- A. Configure the Enable App-V Client setting by using a Group Policy object (GPO).
- B. Deploy the App-V client to the computers.
- C. Install the App-V Sequencer on a reference computer.
- D. From the Configuration Manager console, create an App-V virtual environment.

Correct Answer: B

QUESTION 3

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise, Semi-Annual Channel (Targeted). All the computers are named by

using the name of their respective department and an incremental three-digit number. For example, the first computer in the

sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

View the Upgrade Readiness data of all the client computers.

Deploy App1 to the client computers in the marketing department.

Deploy App2 to the client computers in the human resources (HR) department.

Monitor the usage of App3.

Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.

Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to ensure that you can deploy App1 to the marketing department computers.

What should you do?

A. Download the App-V client and install the client by using a Group Policy object (GPO).

B. Sequence App1 by using the App-V Sequencer.

- C. Download the App-V client and deploy the client by using a Configuration Manager application.
- D. Deploy a Group Policy object (GPO) that enables the App-V client.

Correct Answer: D

References: <https://docs.microsoft.com/en-us/windows/application-management/app-v/appv-enable-the-app-v-desktop-client>

QUESTION 4

You have a deployment of System Center Configuration Manager (Current Branch). All client computers run Windows 7 and have the most recent updates installed. Configuration Manager and Microsoft Operations Manager Suite (OMS) are

integrated.

You plan to use Upgrade Readiness to identify which computers support Windows 10.

You need to ensure that the computers report data to OMS.

Which two actions should you perform? Each correct answer presents part of solution.

NOTE: Each correct selection is worth one point.

- A. From Client Settings, configure a commercial ID key.
- B. Configure Asset Intelligence.
- C. From Client Settings, configure Windows telemetry.
- D. Configure a software inventory.
- E. Configure a hardware inventory.

Correct Answer: AC

<https://docs.microsoft.com/en-us/sccm/core/clients/manage/monitor-windows-analytics>

QUESTION 5

You have a deployment of System Center Configuration Manager (Current Branch).

You configure the environment for co-management.

You need to install the Configuration Manager client on all computers that are enrolled in Microsoft Intune.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Distribute the Configuration Manager client installation files to the cloud-based distribution point.

- B. From Intune, deploy an app that contains Cccmsetup.msi.
- C. From Configuration Manager, deploy a cloud-based distribution point.
- D. From Configuration Manager, enable site-wide client push installation.
- E. From Intune, deploy an app that contains Client.msi.

Correct Answer: ABC
