QUESTION 1

You have a deployment of System Center Configuration Manager (Current Branch).

You add the cloud management gateway connector point to the deployment.

Which site system role can be configured to receive the traffic from the cloud management gateway?

- A. Service connection point
- B. Software update point
- C. Asset Intelligence synchronization point
- D. Endpoint Protection point
- E. Distribution point
- Correct Answer: B

QUESTION 2

You have a deployment of System Center Configuration Manager (Current Branch).

You need to recommend a solution to manage and reduce the attack surface of applications used in your environment.

What should you include in the recommendation?

- A. Windows Defender Exploit Guard
- B. antimalware policies
- C. Windows Defender Advanced Threat Protection (ATP) policies
- D. compliance policies
- Correct Answer: A

QUESTION 3

You have a deployment of System Center Configuration Manager (Current Branch).

You deploy several Microsoft Store for Business apps to client computers by using Configuration Manager.

You purchase a new Microsoft Store for Business app named App1. App1 is licensed for offline use.

You need to ensure that you can deploy App1 immediately by using Configuration Manager.

What should you do?

A. From the Configuration Manager console, synchronize the Windows Store for Business.

B. From the Microsoft Azure portal, add App1 to Azure Active Directory.

C. From the Configuration Manager console, run the Azure Services Wizard.

D. From Microsoft Intune in the Microsoft Azure portal, add App1 to Intune.

Correct Answer: A

QUESTION 4

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is

exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise, Semi-Annual Channel (Targeted). All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the

sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

- View the Upgrade Readiness data of all the client computers.
- Deploy App1 to the client computers in the marketing department.

Deploy App2 to the client computer in the human resources (HR) department.

Monitor the usage of App3.

Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.

Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to meet the requirements for App3.

What should you configure?

- A. a configuration baseline
- B. software metering
- C. a software inventory
- D. an application
- E. a computer agent

Correct Answer: B

QUESTION 5

You have a deployment of System Center Configuration Manager (Current Branch).

5,000 computers have the Configuration Manager client installed.

You need to deploy an online-licensed app named App1 from the Microsoft Store for Business to all Configuration Manager clients.

What should you do first?

A. From the Configuration Manager console, launch the Microsoft Azure Services Wizard and select Microsoft Store for Business.

B. From the Microsoft Store for Business portal, create a new AutoPilot deployment profile.

C. From the Microsoft Store for Business portal, invite a line-of-business (LOB) publisher to your organization.

D. From the Configuration Manager console, create a new collection.

Correct Answer: A
