#### QUESTION 1

What is the Avaya supported method of backing up an Avaya Aura Session Manager (SM) database?

- A. Perform the backup from an Avaya Aura System Manager.
- B. Connect a Memory Drive into the SM Server with an automatic Backup-making script.
- C. Access the SM Command Line Interface (CLI) and perform a Backup manually.
- D. Wait for the overnight Backup process to send you a copy of the .tar file automatically.

Correct Answer: A

## Chapter 13: Managing system data

---

### Backup and Restore

The backup and restore functions run on System Manager.

System Manager creates one backup file that contains all the data for the entire system. You do not need to create individual backup files of all the Session Manager instances. The data and configuration files for the entire system are stored centrally on System Manager.

System Manager supports local backup and remote backup. You can transfer backup files by using the sftp or scp protocol.

You can perform either a backup or a restore operation at a specified time. The restore operation fails if a backup operation is in progress. When a restore operation is in progress, the system ignores all backup jobs that are scheduled at that time. System Manager displays a warning if you attempt to restore a corrupted or tampered backup file.

---

#### QUESTION 2

Which Avaya Equinox?application product provides Enterprise level instant messaging, and can be delivered as part of the Presence Snap-in?

- A. Multimedia Messaging
- B. Avaya IX Messaging
- C. Avaya Aura Device Services (AADS)
- D. Avaya Aura Application Enablement Services (AES)

Correct Answer: B

---

**QUESTION 3**

Which Communication Manager feature deals with the routing of Public Calls?

- A. Uniform Dial Plan
- B. Automatic Alternate Routing (AAR)
- C. Automatic Route Selection (ARS)
- D. Dial Plan Parameters

Correct Answer: B

---

**QUESTION 4**

How do you verify that the Avaya Aura Session Manager (SM) replica NODE is synchronized?

- A. Register an Avaya SIP Telephone (AST) and check to see its feature buttons.
- B. Check the status of the Replication group/Replication Nodes.
- C. Check in the Replica Group for a green '\\\Session Manager OK\\\'.
- D. PuTTY to Avaya Aura Session Management (SM) and run statusapp, and then check that all processes are started.

Correct Answer: B

---

**QUESTION 5**

A large enterprise is using an Avaya Aura Core. An Avaya SIP Endpoint, one X?Communicator, controlled by Avaya Aura Communication Manager (CM), has been configured with three feature buttons, but none of the buttons appear on the telephone interface. The telephone shows successful registration with Avaya Aura Session Manager (SM) at the SIP Level. What are two possible causes for this feature button failure? (Choose two.)

- A. The SM Server is down.
- B. The SIP Signaling Group between SM and CM is down.
- C. The telephone is pointing to CM Instead of SM for registration.
- D. DSP resource has not been reserved specifically for CM features.
- E. The Application Sequence for CM has not been selected for that SIP user In SM.

Correct Answer: BE
