QUESTION 1

Which configuration parameter is provided by Avaya Multimedia Messaging (AMM) to its Clients during registration in order to provide Multimedia Messaging Service?

- A. Routing Domain
- B. Messaging Domain
- C. IP Address
- D. Time Zone

Correct Answer: B

QUESTION 2

Which statement best describes licensing of the Avaya Equinox™ Management Server?

- A. A license activation code, based on Universal Unique Identifier (UUID), needs to be entered using the web-based Install wizard
- B. A license file, based on WebLM Primary Host ID, is installed on Equinox Management Server
- C. The license file is not required on Equinox Management Server
- D. A license key is entered using the SSH command "activate license_key "

Correct Answer: A

QUESTION 3

Which two deployment models are available for Avaya Equinox™ Solution? (Choose two.)

- A. Turnkey only
- B. Software only
- C. On Windows
- D. Over The Top
- E. Team Engagement

Correct Answer: DE

QUESTION 4

Which Avaya Equinox™ solution component provides the Equinox Client with configuration data?

- A. Avaya Aura® Session Manager
- B. Avaya Aura® Web Gateway
- C. Avaya Aura® System Manager
- D. Avaya Aura® Device Services

Correct Answer: C

QUESTION 5

It is possible to download the same client configuration to an Avaya Equinox™ client when it is connected via the Public Internet (3G/4G) or when it is connected via a corporate Wi-Fi hotspot.

What statement below described the recommended technique used to do this?

- A. The Avaya Aura® Device Services (AADS) returns the configured list of all Public and Private IP addresses that the client should attempt to connect to.
- B. The client must be statically provisioned with the ordered list of server IP addresses that it should attempt to connect to (both private and public).
- C. Split horizon DNS mapping is configured in Avaya Aura® Device Services (AADS) to return FQDNs rather than IP addresses; the client resolves the FQDN to correct server address by DNS or local hosts file.
- D. The client automatically selects a different Avaya Aura® Device Services (AADS) profile when connected to a Public Internet Service Provider (ISP) based on an IP address subnet mapping table downloaded by Avaya Aura® Device Services (AADS).

Correct Answer: C
