QUESTION 1

You cannot get to any site on the Internet or on the school's intranet. Your school uses DHCP. You check your network settings, which are configured as shown in the following image:

You need to change the settings to access websites.

Use the drop-down menus to select the answer choice that completes each statement. Each correct selection is worth one point.

Hot Area:

Answer Area

Changing the IP address settings to **[answer choice]** will allow Internet access.

<input type="radio"/> have a default gateway address of 192.168.1.1 <input type="radio"/> have a default gateway address of 192.168.13.13 <input type="radio"/> obtain an IP address automatically	▼
--	---

Setting the DNS server settings to **[answer choice]** will allow the user's computer to look up website addresses.

<input type="radio"/> obtain DNS server address automatically <input type="radio"/> set Preferred DNS server to Nothing <input type="radio"/> set Alternate DNS server to 192.168.13.13	▼
---	---

Correct Answer:

Answer Area

Changing the IP address settings to [answer choice] will allow Internet access.

have a default gateway address of 192.168.1.1
have a default gateway address of 192.168.13.13
obtain an IP address automatically

Setting the DNS server settings to [answer choice] will allow the user's computer to look up website addresses.

obtain DNS server address automatically
set Preferred DNS server to Nothing
set Alternate DNS server to 192.168.13.13

QUESTION 2

Which type of port is used to support VLAN traffic between two switches?

- A. Virtual port
- B. WAN port
- C. Trunk port
- D. LAN port

Correct Answer: C

Trunk links are required to pass VLAN information between switches.

QUESTION 3

What are two characteristics of a mesh network topology? (Choose two.)

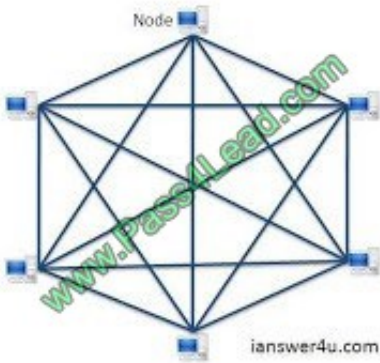

- A. It is fault tolerant because of redundant connections.
- B. Every node connects to every other node on the network.
- C. It works best for networks with a large number of nodes.
- D. It requires less cabling than either a star or ring topology.

Correct Answer: AB

In a (full) mesh network topology, each of the network node, computer and other devices, are interconnected with one another. Every node not only sends its own signals but also relays data from other nodes. In fact a true mesh topology is the one where every node is connected to every other node in the network. This type of topology is very expensive as there are many redundant connections, thus it is not mostly used in computer networks. It is commonly used in wireless networks.

QUESTION 4

The top-level domain of www.adventureworks.com is:

- A. www
- B. adventureworks
- C. adventureworks.com
- D. com

Correct Answer: D

A top-level domain (TLD) is one of the domains at the highest level in the hierarchical Domain Name System of the Internet.

QUESTION 5

This question requires that you evaluate the underlined text to determine if it is correct.

To set lower security settings in Internet Explorer for an extranet site, add the site's URL to the "Local Intranet" zone.

Select the correct answer if the underlined text does not make the statement correct. Select "No change is needed" if the underlined text makes the statement correct.

- A. Internet
- B. Trusted Sites
- C. Extranet Sites
- D. No change is needed

Correct Answer: B

Trusted sites

The level of security set for Trusted sites is applied to sites that you have specifically indicated to be ones that you trust not to damage your computer or information.

Reference: Change Internet Explorer Security settings
