users click on the Retailer name in the left and see the related data on the right. What is the technique used to create this report?

- A. Master-detail relationship where the master and the detail is in a separate list
- B. Drill-through definition where one column in a list drills through to a separate list in the same report
- C. Master-detail relationship where the master and the detail is in the same list
- D. Drill-through definition where one column in a list drills through to the same list in the same report

Correct Answer: B

#### QUESTION 5

In Report Studio, an author merges Query1 and Query2 into one result set (Query3) using a Union set operator. Query1 contains two data items: Order method and Revenue. Query2 also contains two data items: Product line and Quantity sold. The author wants to display the data from Query3 in a list report. How can the author ensure that all the order method results appear together and all product line results appear together in the list report?

- A. The author must add a sort key data item directly to Query3.
- B. The author must sort the Order method data item in Query1 and the Product line data item in Query2.
- C. The author must sort the data item in the Query3 that retrieves both Order method and Product line data.
- D. The author must add a sort key data item to Query1 and to Query2, and then add this sort key data item to Query3.

Correct Answer: D
