QUESTION 1

Which statement is true about running the afuEnableItem process?

- A. The item type name is case sensitive.
- B. Item type names must be listed in order.
- C. All command line arguments are not case sensitive.
- D. The command line arguments can appear in any order.

Correct Answer: D

QUESTION 2

What utility would be used to gather the required version information for Content Collector and components when opening a support request?

- A. Content Collector trace logs
- B. Component Version Report tool
- C. Content Collector version configuration file
- D. Content Collector Configuration Manager version header information

Correct Answer: B

QUESTION 3

Which of the following can be configured for audit logs?

- A. Local audit logging or remote audit logging.
- B. Audit log folder location and audit log security.
- C. Maximum size (in KB) and retention (in days).
- D. One log per collector and one log folder per collector.

Correct Answer: C

QUESTION 4

Starting the content manager indexer for text search requires providing the password of an administrative user id. How can the password be provided, therefore avoiding typing it in the command line of the indexer for text? (Choose two.)

- A. Modify the indexing script with the proper password.

- B. The typing of the password in the command line cannot be avoided. It must be entered directly after the -password option.
- C. The password can be stored into a file. The filename can be provided in the command line with the password option prefixing the filename with a colon ":".
- D. The password can be entered in a hidden prompt field after the command line. The hidden field can be requested in the command line with the -password option followed by a question mark "?".
- E. The password can be provided in an environment variable. The name of the environment variable can be provided in the command line with the -password option prefixing its name with an at-sign "@".

Correct Answer: CE

QUESTION 5
